

# Colorado Department of Public Health and Environment

# **OPERATING PERMIT**

DCP Midstream, LP – Marla Compressor Station

First Issued: June 1, 1999

# AIR POLLUTION CONTROL DIVISION COLORADO OPERATING PERMIT

FACILITY NAME: Marla Compressor OPERATING PERMIT NUMBER

Station

FACILITY ID: 1230243

RENEWED: January 1, 2013 EXPIRATION DATE: January 1, 2018

MODIFICATIONS: See Appendix F of Permit

Issued in accordance with the provisions of Colorado Air Pollution Prevention and Control Act, 25-7-101 et

seq. and applicable rules and regulations.

ISSUED TO: PLANT SITE LOCATION:

DCP Midstream, LP

370 17<sup>th</sup> Street, Suite 2500 SESE, Section 28, T4N, R64W

Denver, CO 80202 South of Kersey (Kersey, CO 80644)

Weld County

INFORMATION RELIED UPON

Operating Permit Renewal Application Received: April 28, 2011

And Additional Information Received: July 29, 2008, August 7, 2009, April 1, 2010, April 12,

2010, April 28, 2011, and May 11, 2011

950PWE020

Nature of Business: Natural gas liquids gathering

Primary SIC: 1311

RESPONSIBLE OFFICIAL FACILITY CONTACT PERSON

Name: Joe Kuchinski Name: Brian S. Taylor

Title: Vice President, Area Title: Senior Environmental Specialist

Operations North

Phone: 970-378-6345 Phone: 303-605-2185

SUBMITTAL DEADLINES

Semi-Annual Monitoring Period: January 1 – June 30, July 1 – December 31

Semi-Annual Monitoring Report: August 1, 2013 & February 1, 2014 and subsequent years

Annual Compliance Period: January 1 – December 31

Annual Compliance Certification: February 1, 2014 and subsequent years

Note that the Semi-Annual Monitoring Reports and Annual Compliance Certifications must be received at the Division office by 5:00 p.m. on the due date. Postmarked dates will not be accepted for the purposes of determining the timely receipt of those reports/certifications.

### **SECTION I - General Activities and Summary**

#### 1. Permitted Activities

1.1 The Marla Compressor Station uses six (6) gas-fired internal combustion engines to drive compressors to transmit natural gas gathered from gas field laterals to a primary pipeline. These engines are controlled through non-selective catalytic reduction (NSCR).

The station also includes two (2) triethylene glycol dehydrator units that contact "dry" triethylene glycol with the natural gas stream to remove moisture. The "wet" glycol mixture is regenerated in a still for reuse in the process. These units are equipped with a condenser and flare for VOC control.

The plant is located west of the intersection of Weld County Road (WCR) 55 and WCR 40 on the north side of WCR 40, approximately 13 miles southeast of Greeley. This facility is located in an Area classified as attainment for all pollutants except ozone. It is classified as non-attainment for ozone and is part of the 8-hr Ozone Control Area as defined in Regulation No. 7, Section II.A.1.

Wyoming is an affected state within 50 miles of the Station. Rocky Mountain National Park is a Federal Class I designated area within 100 kilometers of the Station.

- 1.2 Until such time as this permit expires or is modified or revoked, the permittee is allowed to discharge air pollutants from this facility in accordance with the requirements, limitations, and conditions of this permit.
- 1.3 The Operating Permit incorporates the applicable requirements contained in the underlying construction permits, and does not affect those applicable requirements, except as modified during review of the application or as modified subsequent to permit issuance using the modification procedures found in Regulation No. 3, Part C. These Part C procedures meet all applicable substantive New Source Review requirements of Part B. Any revisions made using the provisions of Regulation No. 3, Part C shall become new applicable requirements for purposes of this Operating Permit and shall survive reissuance. This permit incorporates the applicable requirements (except as noted in Section II) from the following construction permits: 01WE0499, 01WE0500, 01WE0501, 01WE0502, 01WE0503, 01WE0504, 01WE0505, 01WE0506, and 05WE0579
- All conditions in this permit are enforceable by US Environmental Protection Agency, Colorado Air Pollution Control Division (hereinafter Division) and its agents, and citizens unless otherwise specified. **State-only enforceable conditions are:** Permit Condition Number(s): Section II Conditions 3.4 and 3.6.1, Section IV Conditions 3.g (last paragraph), 14 and 18.
- 1.5 All information gathered pursuant to the requirements of this permit is subject to the Recordkeeping and Reporting requirements listed under Condition 22 of the General Conditions in Section IV of this permit. Either electronic or hard copy records are acceptable.

First Issued: June 1, 1999

### 2. Alternative Operating Scenarios (ver 10/12/2012)

The following Alternative Operating Scenario (AOS) for the temporary and permanent replacement of natural gas fired reciprocating internal combustion engines has been reviewed in accordance with the requirements of Regulation No. 3., Part A, Section IV.A, Operational Flexibility-Alternative Operating Scenarios, Regulation No. 3, Part B, Construction Permits, and Regulation No. 3, Part D, Major Stationary Source New Source Review and Prevention of Significant Deterioration, and it has been found to meet all applicable substantive and procedural requirements. This permit incorporates and shall be considered a Construction Permit for any engine replacement performed in accordance with this AOS, and the permittee shall be allowed to perform such engine replacement without applying for a revision to this permit or obtaining a new Construction Permit.

## 2.1 Engine Replacement

The following AOS is incorporated into this permit in order to deal with a compressor engine breakdown or periodic routine maintenance and repair of an existing onsite engine that requires the use of either a temporary or permanent replacement engine. "Temporary" is defined as in the same service for 90 operating days or less in any 12 month period. "Permanent" is defined as in the same service for more than 90 operating days in any 12 month period. The 90 days is the total number of days that the engine is in operation. If the engine operates only part of a day, that day shall count as a single day towards the 90-day total. The compliance demonstrations and any periodic monitoring required by this AOS are in addition to any compliance demonstrations or periodic monitoring required by this permit

All replacement engines are subject to all federally applicable and state-only requirements set forth in this permit (including monitoring and record keeping), and shall be subject to any shield afforded by this permit

The results of all tests and the associated calculations required by this AOS shall be submitted to the Division within 30 calendar days of the test or within 60 days of the test if such testing is required to demonstrate compliance with NSPS or MACT requirements. Results of all tests shall be kept on site for five (5) years and made available to the Division upon request.

The permittee shall maintain a log on-site and contemporaneously record the start and stop date of any engine replacement, the manufacturer, date of manufacture, model number, horsepower, and serial number of the engine(s) that are replaced during the term of this permit, and the manufacturer, model number, horsepower, and serial number of the replacement engine. In addition to the log, the permittee shall maintain a copy of all Applicability Reports required under section 2.1.2 and make them available to the Division upon request.

2.1.1 The permittee may **temporarily** replace an existing compressor engine that is subject to the emission limits set forth in this permit with an engine that is of the same manufacturer, model, and horsepower or a different manufacturer, model, or horsepower as the existing engine without modifying this permit, so long as the temporary replacement engine complies with all permit limitations and other requirements

First Issued: June 1, 1999

applicable to the existing engine. Measurement of emissions from the temporary replacement engine shall be made as set forth in section 2.2.

The permittee may temporarily replace a grandfathered or permit exempt engine or an engine that is not subject to emission limits without modifying this permit. In this circumstance, potential annual emissions of  $NO_x$  and CO from the temporary replacement engine must be less than or equal to the potential annual emissions of  $NO_x$  and CO from the original grandfathered or permit exempt engine or for the engine that is not subject to emission limits, as determined by applying appropriate emission factors (e.g. AP-42 or manufacturer's emission factors)

2.1.2 The permittee may **permanently** replace the existing compressor engine for the emission points specified in Table 1 with the manufacturer, model, and horsepower engines listed in Table 1 without modifying this permit so long as the permanent replacement engine complies with all permit limitations and other requirements applicable to the existing engine as well as any new applicable requirements for the replacement engine. Measurement of emissions from the permanent replacement engine and compliance with the applicable emission limitations shall be made as set forth in section 2.2.

The AOS cannot be used for the permanent replacement of an entire engine at any source that is currently a major stationary source for purposes of Prevention of Significant Deterioration or Non-Attainment Area New Source Review ("PSD/NANSR") unless the existing engine has emission limits that are below the significance levels in Reg 3, Part D, II.A.42.

An Air Pollutant Emissions Notice (APEN) that includes the specific manufacturer, model and serial number and horsepower of the permanent replacement engine shall be filed with the Division for the permanent replacement engine within 14 calendar days of commencing operation of the replacement engine. The APEN shall be accompanied by the appropriate APEN filing fee, a cover letter explaining that the permittee is exercising an alternative operating scenario and is installing a permanent replacement engine, and a copy of the relevant Applicability Reports for the replacement engine. Example Applicability Reports can be found in Appendix A. This submittal shall be accompanied by a certification from the Responsible Official indicating that "based on the information and belief formed after reasonable inquiry, the statements and information included in the submittal are true, accurate and complete".

This AOS cannot be used for permanent engine replacement of a grandfathered or permit exempt engine or an engine that is not subject to emission limits.

The permittee shall agree to pay fees based on the normal permit processing rate for review of information submitted to the Division in regard to any permanent engine replacement.

Nothing in this AOS shall preclude the Division from taking an action, based on any permanent engine replacement(s), for circumvention of any state or federal PSD/NANSR

requirement. Additionally, in the event that any permanent engine replacement(s) constitute(s) a circumvention of applicable PSD/NANSR requirements, nothing in this AOS shall excuse the permittee from complying with PSD/NANSR and applicable permitting requirements.

#### 2.2 Portable Analyzer Testing

Note: In some cases there may be conflicting and/or duplicative testing requirements due to overlapping Applicable Requirements. In those instances, please contact the Division Field Services Unit to discuss streamlining the testing requirements.

Note that the testing required by this Condition may be used to satisfy the periodic testing requirements specified by the permit for the relevant time period (i.e. if the permit requires quarterly portable analyzer testing, this test conducted under the AOS will serve as the quarterly test and an additional portable analyzer test is not required for another three months).

The permittee may conduct a reference method test, in lieu of the portable analyzer test required by this Condition, if approved in advance by the Division.

The permittee shall measure nitrogen oxide ( $NO_X$ ) and carbon monoxide (CO) emissions in the exhaust from the replacement engine using a portable flue gas analyzer within seven (7) calendar days of commencing operation of the replacement engine.

All portable analyzer testing required by this permit shall be conducted using the Division's Portable Analyzer Monitoring Protocol (ver March 2006 or newer) as found on the Division's web site at: <a href="http://www.colorado.gov/cs/Satellite/CDPHE-AP/CBON/1251596520270">http://www.colorado.gov/cs/Satellite/CDPHE-AP/CBON/1251596520270</a>.

Results of the portable analyzer tests shall be used to monitor the compliance status of this unit.

For comparison with an annual (tons/year) or short term (lbs/unit of time) emission limit, the results of the tests shall be converted to a lb/hr basis and multiplied by the allowable operating hours in the month or year (whichever applies) in order to monitor compliance. If a source is not limited in its hours of operation the test results will be multiplied by the maximum number of hours in the month or year (8760), whichever applies.

For comparison with a short-term limit that is either input based (lb/MMBtu), output based (g/hp-hr) or concentration based (ppmvd @ 15% O<sub>2</sub>) that the existing unit is currently subject to or the replacement engine will be subject to, the results of the test shall be converted to the appropriate units as described in the above-mentioned Portable Analyzer Monitoring Protocol document.

If the portable analyzer results indicate compliance with both the  $NO_X$  and CO emission limitations, in the absence of credible evidence to the contrary, the source may certify that the engine is in compliance with both the  $NO_X$  and CO emission limitations for the relevant time period.

Subject to the provisions of C.R.S. 25-7-123.1 and in the absence of credible evidence to the contrary, if the portable analyzer results fail to demonstrate compliance with either the  $NO_X$  or CO emission limitations, the engine will be considered to be out of compliance from the date of the portable analyzer test until a portable analyzer test indicates compliance with both the  $NO_X$  and CO emission limitations or until the engine is taken offline

- 2.3 Applicable Regulations for Permanent Engine Replacements
  - 2.3.1 Reasonably Available Control Technology (RACT): Reg 3, Part B § II.D.2

All permanent replacement engines that are located in an area that is classified as attainment/maintenance or nonattainment must apply Reasonably Available Control Technology (RACT) for the pollutants for which the area is attainment/maintenance or nonattainment. Note that both VOC and  $NO_X$  are precursors for ozone. RACT shall be applied for any level of emissions of the pollutant for which the area is in attainment/maintenance or nonattainment, except as follows:

In the Denver Metropolitan  $PM_{10}$  attainment/maintenance area, RACT applies to  $PM_{10}$  at any level of emissions and to  $NO_X$  and  $SO_2$ , as precursors to  $PM_{10}$ , if the potential to emit of  $NO_X$  or  $SO_2$  exceeds 40 tons/yr.

For purposes of this AOS, the following shall be considered RACT for natural-gas fired reciprocating internal combustion engines:

VOC: The emission limitations in NSPS JJJJ CO: The emission limitations in NSPS JJJJ NO<sub>X</sub>: The emission limitations in NSPS JJJJ

SO<sub>2</sub>: Use of natural gas as fuel PM<sub>10</sub>: Use of natural gas as fuel

As defined in 40 CFR Part 60 Subparts GG (§ 60.331) and 40 CFR Part 72 (§ 72.2), natural gas contains 20.0 grains or less of total sulfur per 100 standard cubic feet.

2.3.2 Control Requirements and Emission Standards: Regulation No. 7, Sections XVI. and XVII.E (State-Only conditions).

Control Requirements: Section XVI

Any permanent replacement engine located within the boundaries of an ozone nonattainment area is subject to the applicable control requirements specified in Regulation No. 7, section XVI, as specified below:

Rich burn engines with a manufacturer's design rate greater than 500 hp shall use a non-selective catalyst and air fuel controller to reduce emission.

Lean burn engines with a manufacturer's design rate greater than 500 hp shall use an oxidation catalyst to reduce emissions.

The above emission control equipment shall be appropriately sized for the engine and shall be operated and maintained according to manufacturer specifications.

The source shall submit copies of the relevant Applicability Reports required under Condition 2.1.2.

*Emission Standards: Section XVII.E – State-only requirements* 

Any permanent engine that is either constructed or relocated to the state of Colorado from another state, after the date listed in the table below shall operate and maintain each engine according to the manufacturer's written instructions or procedures to the extent practicable and consistent with technological limitations and good engineering and maintenance practices over the entire life of the engine so that it achieves the emission standards required in the table below:

Max Engine HP	Construction or Relocation Date	Emission Standards in G/hp-hr				
		NO <sub>X</sub> CO VOC				
100 <hp<500< td=""><td>January 1, 2008</td><td>2.0</td><td>4.0</td><td>1.0</td></hp<500<>	January 1, 2008	2.0	4.0	1.0		
	January 1, 2011	1.0 2.0 0.7		0.7		
500 <u>≤</u> Hp	July 1, 2007	2.0	4.0	1.0		
	July 1, 2010	1.0	2.0	0.7		

The source shall submit copies of the relevant Applicability Reports required under Condition 2.1.2.

# 2.3.3 NSPS for stationary spark ignition internal combustion engines: 40 CFR Part 60, Subpart JJJJ

A permanent replacement engine that is manufactured on or after 7/1/09 for emergency engines greater than 25 hp, 7/1/2008 for engines less than 500 hp, 7/1/2007 for engines greater than or equal to 500 hp except for lean burn engines greater than or equal to 500 hp and less than 1,350 hp, and 1/1/2008 for lean burn engines greater than or equal to 500 hp and less than 1,350 hp are subject to the requirements of 40 CFR Part 60, Subpart JJJJ. An analysis of applicable monitoring, recordkeeping, and reporting requirements for the permanent engine replacement shall be included in the Applicability Reports required under Condition 2.1.2. Any testing required by the NSPS is in addition to that required by this AOS. Note that the initial test required by NSPS Subpart JJJJ can serve as the testing required by this AOS under Condition 2.2, if approved in advance by the Division, provided that such test is conducted within the time frame specified in Condition 2.2.

Note that under the provisions of Regulation No. 6. Part B, section I.B. that Relocation of a source from outside of the State of Colorado into the State of Colorado is considered to be a new source, subject to the requirements of Regulation No. 6 (i.e., the date that the source is first relocated to Colorado becomes equivalent to the manufacture date for purposes of determining the applicability of NSPS JJJJ requirements).

First Issued: June 1, 1999

However, as of October 1, 2011 the Division has not yet adopted NSPS JJJJ. Until such time as it does, any engine subject to NSPS will be subject only under Federal law. Once the Division adopts NSPS JJJJ, there will be an additional step added to the determination of the NSPS. Under the provisions of Regulation No. 6, Part B, § I.B (which is referenced in Part A), any engine relocated from outside of the State of Colorado into the State of Colorado is considered to be a new source, subject to the requirements of NSPS JJJJ.

# 2.3.4 Reciprocating internal combustion engine (RICE) MACT: 40 CFR Part 63, Subpart ZZZZ

A permanent replacement engine located at either an area or major source is subject to the requirements in 40 CFR Part 63, Subpart ZZZZ. An analysis of the applicable monitoring, recordkeeping, and reporting requirements for the permanent engine replacement shall be included in the Applicability Reports required under Condition 2.1.2. Any testing required by the MACT is in addition to that required by this AOS. Note that the initial test required by the MACT can serve as the testing required by this AOS under Condition 2.2, if approved in advance by the Division, provided that such test is conducted within the time frame specified in Condition 2.2.

#### 2.4 Additional Sources

The replacement of an existing engine with a new engine is viewed by the Division as the installation of a new emissions unit, not "routine replacement" of an existing unit. The AOS is therefore essentially an advanced construction permit review. The AOS cannot be used for additional new emission points for any site; an engine that is being installed as an entirely new emission point and not as part of an AOS-approved replacement of an existing onsite engine has to go through the appropriate Construction/Operating permitting process prior to installation

Table 1
Internal Combustion Engine Information For AOS

Emission Point	Replacement Engine	Periodic Monitoring	Subject to CAM?
C-148	Waukesha Model L-7042 GSI, natural gas fired internal combustion reciprocating engine, 4-cycle, standard rich burn, 1478 HP; with AFR & NSCR	Portable Monitoring Quarterly	Yes
C-135	Waukesha Model L-7042 GSI, natural gas fired internal combustion reciprocating engine, 4-cycle, standard rich burn, 1478 HP; with AFR & NSCR	Portable Monitoring Quarterly	Yes
C-151	Waukesha Model L-7042 GSI, natural gas fired internal combustion reciprocating engine, 4-cycle, standard rich burn, 1478 HP; with AFR & NSCR	Portable Monitoring Quarterly	Yes
C-166	Waukesha Model L-7044 GSI, natural gas fired internal combustion reciprocating engine, 4-cycle, standard rich burn, 1680 HP; with AFR & NSCR	Portable Monitoring Quarterly	Yes
C-174	Waukesha Model L-7044 GSI Natural Gas Fired Internal Combustion Reciprocating Engine, 4-cycle, Standard Rich Burn, 1680 HP; with AFR & NSCR	Portable Monitoring Quarterly	Yes
C-176	Waukesha Model L-7044 GSI Natural Gas Fired Internal Combustion Reciprocating Engine, 4-cycle, Standard Rich Burn, 1680 HP; with AFR & NSCR	Portable Monitoring Quarterly	Yes

## 3. Prevention of Significant Deterioration

3.1 This facility is categorized as a NANSR major stationary source (Potential to Emit of VOC and  $NO_X \ge 100$  Tons/Year). Future modifications at this facility resulting in a significant net emissions increase (see Reg 3, Part D, Sections II.A.26 and 42) for VOC or  $NO_X$  or a modification which is major by itself (i.e. a Potential to Emit of  $\ge 100$  TPY of either VOC or  $NO_X$ ) may result in the application of the NANSR review requirements.

Based on the information provided by the applicant, this source is categorized as a minor stationary source for PSD as of the issue date of this permit. Any future modification which is major by itself (Potential to Emit of  $\geq$  250 TPY) for any pollutant listed in Regulation No. 3, Part D, Section II.A.42 for which the area is in attainment or attainment/maintenance may result in the application of the PSD review requirements.

3.2 There are no other Operating Permits associated with this facility for purposes of determining applicability of Prevention of Significant Deterioration regulations.

#### 4. Accidental Release Prevention Program (112(r))

4.1 Based upon the information provided by the applicant, this facility is not subject to the provisions of the Accidental Release Prevention Program (Section 112(r) of the Federal Clean Air Act).

First Issued: June 1, 1999

# **5.** Compliance Assurance Monitoring (CAM)

5.1 The following emission points at this facility use a control device to achieve compliance with an emission limitation or standard to which they are subject and have pre-control emissions that exceed or are equivalent to the major source threshold. They are therefore subject to the provisions of the CAM program as set forth in 40 CFR Part 64, as adopted by reference in Colorado Regulation No. 3, Part C, Section XIV:

C-148, C-135, C-151 – Waukesha Model L-7042 ICE

C-166, C-174 & C-176– Waukesha Model L-7044 ICE

P-112 – Natural Gas Dehydration System

P-113 – Natural Gas Dehydration System

# 6. Summary of Emission Units

# 6.1 The emissions units regulated by this permit are the following:

AIRS Point Number	Facility Identifier	Description	Pollution Control Device
052	C-148 (P-102)	Waukesha Model L-7042 GSI Natural Gas Fired Internal Combustion Reciprocating Engine, 4-cycle, Standard Rich Burn, Serial No. 383730, 1478 HP; powering a natural gas compressor	Non-Selective Catalytic Reduction & Air/Fuel ratio controller
053	C-135 (P-103)	Waukesha Model L-7042 GSI Natural Gas Fired Internal Combustion Reciprocating Engine, 4-cycle, Standard Rich Burn, Serial No. 317310, 1478 HP; powering a natural gas compressor	Non-Selective Catalytic Reduction & Air/Fuel ratio controller
054	C-151 (P-104)	Waukesha Model L-7042 GSI Natural Gas Fired Internal Combustion Reciprocating Engine, 4-cycle, Standard Rich Burn, Serial No. C-12843/1, 1478 HP; powering a natural gas compressor	Non-Selective Catalytic Reduction & Air/Fuel ratio controller
056	P-106	Equipment Fugitive Leak VOC Emissions	None
059	C-166 (P-109)	Waukesha Model L-7044 GSI Natural Gas Fired Internal Combustion Reciprocating Engine, 4-cycle, Standard Rich Burn, Serial No. C-13857/1, 1680 HP; powering a natural gas compressor	Non-Selective Catalytic Reduction & Air/Fuel ratio controller
060	C-174 (P-110)	Waukesha Model L-7044 GSI Natural Gas Fired Internal Combustion Reciprocating Engine, 4-cycle, Standard Rich Burn, Serial No. C-13848/1, 1680 HP; powering a natural gas compressor	Non-Selective Catalytic Reduction & Air/Fuel ratio controller
061	C-176 (P-111)	Waukesha Model L-7044 GSI Natural Gas Fired Internal Combustion Reciprocating Engine, 4-cycle, Standard Rich Burn, Serial No. C-13858/1, 1680 HP; powering a natural gas compressor	Non-Selective Catalytic Reduction & Air/Fuel ratio controller
062	P-112	Natural Gas Dehydration System using triethylene glycol; maximum glycol recirculation rate of 6.25 gallons/minute	Condenser & Enclosed Flare
063	P-113	Natural Gas Dehydration System using triethylene glycol; maximum glycol recirculation rate of 6.25 gallons/minute	Condenser & Enclosed Flare

All horsepower (HP) values are site rated values as reported in the Title V application

# **SECTION II - Specific Permit Terms**

# 1. Three Waukesha L-7042 GSI, 1478 hp engines (C-148, C-135, C-151) with NSCR; Three Waukesha L-7044 GSI, 1680 hp engines (C-166, C-174, C-176) with NSCR

Note: These limitations apply to each engine individually.

	Permit		Compliance	Monitorir	ng
Parameter	Condition Number	Limitations	Emission Factor	Method	Interval
NO <sub>X</sub>	1.1	C-148: 42.82 ton/yr	0.84 lb/MMBtu	Record keeping	Monthly
		C-135: 28.54 ton/yr	0.56 lb/MMBtu	and calculation	-
		C-151: 14.27 ton/yr	0.28 lb/MMBtu	12 month rolling	
		C-166, C-174, C-176: 32.45 ton/yr	0.56 lb/MMBtu

VOC		C-148, C-135: 14.27 ton/yr	0.28 lb/MMBtu		
		C-151: 9.99 ton/yr	0.20 lb/MMBtu		
		C-166, C-174, C-176: 16.22 ton/yr	0.28 lb/MMBtu		
HAP Emissions		Facility wide: Individual HAP: 8.0 tons/yr			
		Total HAPs: 20.0 ton/yr			
Natural Gas	1.2	C-148, C-135, C-151: 84.5 MMscf/yr			
Consumption		C-166, C-174, C-176: 96.4 MMscf/yr			
Opacity	1.3	Not to Exceed 20% Except as Provided for Below		Fuel Restriction	Only Natural Gas is
		For Startup – Not to Exceed 30%, for a Period or Periods Aggregating More than Six (6) Min in any 60 Consecutive Min			Used as Fuel
Portable Monitoring	1.4			Flue Gas Analyzer	Quarterly
Hours of Operation	1.5			Recordkeeping	Monthly
Btu Content of Natural Gas	1.6			ASTM or other Division Approved Method	Semi- Annually
CAM	1.7			See Condition	on 4
Emissions Control	1.8	Non-selective catalyst reduction and an air fuel controller required.		See Conditio	n 1.8
NESHAP Subpart ZZZZ	1.9	Limit Formaldehyde concentrations to 2.7 ppmvd @ 15% O <sub>2</sub> or Reduce Formaldehyde by 76%		See Conditio	n 1.9
NESHAP Subpart A	1.10			See Condition	n 1.10

1.1 Nitrogen Oxide (NO<sub>X</sub>), Carbon Monoxide (CO), Volatile Organic Compound (VOC), and Hazardous Air Pollutant (HAP) emissions from **each engine** shall not exceed the limitations stated in the table above (Colorado Construction Permit 01WE0499, 01WE0500, 01WE0501, 01WE0503, 01WE0504 & 01WE0505, as modified under the provisions of Section I, Condition 1.3). Except as provided for below, the emission factors listed above have been approved by the Division and shall be used to calculate emissions from this engine, as follows:

Monthly emissions of each pollutant shall be calculated by the end of the subsequent month using the above emission factors, the monthly natural gas consumption and the lower heating value of the fuel in the equation below:

Tons/mo = Emission Factor (lbs/MMBtu) x Monthly Fuel Use (MMscf/mo) x Heat Content (MMBTU/MMscf) 2000 lbs/ton

A twelve month rolling total of emissions will be maintained in order to monitor compliance with the annual emission limitation. Each month, a new twelve month total shall be calculated using the previous twelve months data.

If the results of the portable analyzer testing conducted under the provisions of condition 1.4 show that either the  $NO_X$  or CO emission rates/factors are greater than those listed above, and in the absence of subsequent testing results to the contrary (as approved by the Division), the permittee shall apply for a modification to this permit to reflect, at a minimum, the higher emission rates/factors within 60 days of the completion of the test.

1.2 Natural gas consumption for **each engine** shall not exceed the limitations shown in the table above. (Construction Permit 01WE0499, 01WE0500, 01WE0501, 01WE0503, 01WE0504 & 01WE0505, as modified under the provisions of Section I, Condition 1.3 of this Operating Permit). Facility-wide natural gas consumption shall be recorded using the existing fuel meter on a monthly basis. The natural gas use shall be measured on the same day that run time hours have been recorded in accordance with Condition 1.5. Allocation of natural gas to each engine will be calculated using the following calculation:

```
Fuel \ Consumption = \frac{(Design \ Heat \ Rate \times Hours \ of \ Operation \times Site \ Rated \ Horsepower)_{individual \ engine}}{\sum (Design \ Heat \ Rate \times Hours \ of \ Operation \times Site \ Rated \ Horsepower)_{each \ engine}} \times Total \ Engine \ Fuel \ Use
```

Records of calculations shall be kept in a log to be made available to the Division upon request. Monthly natural gas consumption from **each engine** shall be used in a twelve month rolling total to monitor compliance with the annual limitation. Each month, a new twelve month total shall be calculated using the previous twelve months data.

1.3 Visible emissions shall not exceed 20% opacity (Colorado Construction Permit 01WE0499, 01WE0500, 01WE0501, 01WE0503, 01WE0504 & 01WE0505 and Colorado Regulation No. 1, Section II.A.1) except during periods of startup when visible emissions shall not exceed 30% opacity for a period or periods aggregating more than six (6) minutes in any sixty (60) consecutive minutes (Colorado Regulation No. 1, Section II.A.4). This opacity standard applies

to **each engine.** In the absence of credible evidence to the contrary, compliance with the opacity limit shall be presumed since only natural gas is permitted to be used as fuel for these engines.

1.4 Portable Monitoring (ver 10/12/2012): Emission measurements of nitrogen oxides (NO<sub>X</sub>) and carbon monoxide (CO) shall be conducted quarterly using a portable flue gas analyzer. At least one calendar month shall separate the quarterly tests. Note that if the engine is operated for less than 100 hrs in any quarterly period, then the portable monitoring requirements do not apply.

All portable analyzer testing required by this permit shall be conducted using the Division's Portable Analyzer Monitoring Protocol (ver March 2006 or newer) as found on the Division's website at: <a href="http://www.colorado.gov/cs/Satellite/CDPHE-AP/CBON/1251596520270">http://www.colorado.gov/cs/Satellite/CDPHE-AP/CBON/1251596520270</a>

Results of the portable analyzer tests shall be used to monitor the compliance status of this unit. For comparison with an annual or short term emission limit, the results of the tests shall be converted to a lb/hr basis and multiplied by the allowable operating hours in the month or year (whichever applies) in order to monitor compliance. If a source is not limited in its hours of operation the test results will be multiplied by the maximum number of hours in the month or year (8760), whichever applies.

If the portable analyzer results indicate compliance with both the  $NO_X$  and CO emission limitations, in the absence of credible evidence to the contrary, the source may certify that the engine is in compliance with both the  $NO_X$  and CO emission limitations for the relevant time period.

Subject to the provisions of C.R.S. 25-7-123.1 and in the absence of credible evidence to the contrary, if the portable analyzer results fail to demonstrate compliance with either the  $NO_X$  or CO emission limitations, the engine will be considered to be out of compliance from the date of the portable analyzer test until a portable analyzer test indicates compliance with both the  $NO_X$  and CO emission limitations or until the engine is taken offline.

For comparison with the emission rates/factors, the emission rates/factors determined by the portable analyzer tests and approved by the Division shall be converted to the same units as the emission rates/factors in the permit. If the portable analyzer tests shows that either the  $NO_X$  or CO emission rates/factors are greater than the relevant ones set forth in the permit, and in the absence of subsequent testing results to the contrary (as approved by the Division), the permittee shall apply for a modification to this permit to reflect, at a minimum, the higher emission rate/factor within 60 days of the completion of the test.

Results of all tests conducted shall be kept on site and made available to the Division upon request.

1.5 Hours of operation of each engine shall be recorded monthly. Records shall be made available for Division review upon request.

- 1.6 The Btu content of the natural gas used to fuel this engine shall be verified semi-annually using the appropriate ASTM Methods or equivalent, if approved in advance by the Division. The Btu content of the natural gas shall be based on the lower heating value of the fuel. Calculations of monthly emissions shall be made using the heat content derived from the most recent required analysis.
- 1.7 The source shall follow the Compliance Assurance Monitoring (CAM) requirements as outlined in Section II, Condition 4 of this permit.
- 1.8 Each engine shall be equipped with both a non-selective catalytic reduction system and an air fuel controller (Colorado Regulation No. 7 Section XVI.B.1). The emission control equipment required by this Condition 1.8 shall be appropriately sized for the engine and shall be operated and maintained according to manufacturer specifications. (Colorado Regulation No. 7, Section XVI.B.3).
  - 1.8.1 The millivolt reading (AFR) for each engine will be monitored and recorded monthly to assess the air to fuel ratio controller operating condition. During those months when portable monitoring is scheduled the millivolt reading shall be monitored and recorded during the portable monitoring event. Recording of the millivolt reading shall be used to verify that the AFR controlled is operated in accordance with the manufacturer's recommendations
  - 1.8.2 The oxygen concentration in the engine exhaust gas shall be measured and recorded for each engine during each portable monitoring event required by Condition 1.4
  - 1.8.3 This engine shall be operated and maintained in accordance with internal operating and maintenance standards, which shall consider manufacturer's recommendations and good engineering practices, at all times, including periods of start-up, shut-down and malfunction.
- 1.9 **[Federal-Only]** These engines are subject to the requirements in 40 CFR Part 63 Subpart ZZZZ, "National Emission Standards for Hazardous Air Pollutants for Stationary Reciprocating Internal Combustion Engines", as follows:

Note that as of the issuance date of this permit [January 1, 2013], the provisions in 40 CFR Part 63 Subpart ZZZZ (those provisions published in the August 20, 2010 Federal Register) have not been adopted in Colorado Regulation No. 6, Part A and Colorado Regulation No. 8, Part E by the Division and are therefore not state-enforceable. In the event that the Division adopts these requirements, these requirements will become both state and federally enforceable.

Note: If there is a change in federal law which renders ineffective or alters the applicable requirements of this Subpart ZZZZ, the source shall follow the effective federal rules.

1.9.1 This facility must comply with the applicable limitations no later than October 19, 2013. (§63.6595(a)(1))

First Issued: June 1, 1999

- 1.9.2 Formaldehyde emission from these engines shall be limited to 2.7 ppmvd at 15% O<sub>2</sub> or reduced by 76 percent or more (Table 2d of Subpart ZZZZ, Item 10).
- 1.9.3 For the non-selective catalytic reduction device installed to meet the requirement in Condition 1.9.2, the following operating requirements shall apply: (Table 1b of Subpart ZZZZ, Item 1)
  - 1.9.3.1 Maintain each catalyst so that the pressure drop across the catalyst does not change by more than 2 inches of water at 100 percent load plus or minus 10 percent from the pressure drop across the catalyst measured during the initial performance test and
  - 1.9.3.2 Maintain the temperature of each engine's exhaust so the catalyst inlet temperature is greater than or equal to 750°F and less than or equal to 1250°F.

### Performance Tests

- 1.9.4 Initial performance tests must be conducted within 180 days after the compliance date specified in Condition 1.9.1 according to the provisions of §63.7(a)(2). (§63.6612(a))
  - 1.9.4.1 An initial performance test is not required on a unit which a performance test has previously been conducted, provided the test meets the conditions described in §63.6612(b)(1) through (4). (§63.6612(b))
- 1.9.5 Performance tests must be conducted using the appropriate ASTM methods or equivalent, if approved in advance by the EPA, as described in Table 4 to Subpart ZZZZ, according to the following protocol:
  - 1.9.5.1 Select the sampling port location and the number of traverse points
    - a. Sampling sites must be located at the inlet and outlet of the control device
  - 1.9.5.2 Measure  $O_2$  at the inlet and outlet of the control device
    - a. Measurements to determine  $O_2$  concentration must be made at the same time as the measurements for formaldehyde concentration
  - 1.9.5.3 Measure moisture content at the inlet and outlet of the control device
    - a. Measurements to determine moisture content must be made at the same time and location as the measurements for formaldehyde concentration
  - 1.9.5.4 Measure formaldehyde at the inlet and the outlet of the control device
    - a. Formaldehyde concentration must be at 15 percent  $O_2$ , dry basis. Results of this test consist of the average of the three 1-hour or longer runs

#### **Demonstrating Compliance**

1.9.6 Initial compliance with the requirement to limit concentration **or** reduce formaldehyde emissions in Condition 1.9.2 is demonstrated by achieving the following:

First Issued: June 1, 1999

- 1.9.6.1 The average reduction of emissions of formaldehyde determined from the initial performance test is equal to or greater than the required formaldehyde percent reduction or the average formaldehyde concentration, corrected to 15% O2, dry basis, from the initial performance test is less than or equal to the emission limitation; (Table 5 of Subpart ZZZZ, Item 7.a.i or 10.a.i) and
- 1.9.6.2 A CPMS has been installed to continuously monitor catalyst inlet temperature according to the requirements in §63.6625(b); (Table 5 of Subpart ZZZZ, Item 7.a.ii or 10.a.ii) and
- 1.9.6.3 The catalyst pressure drop and catalyst inlet temperature have been recorded during the initial performance test. (Table 5 of Subpart ZZZZ, Item 7.a.iii or 10.a.iii)
- 1.9.7 Demonstrate continuous compliance with the limitations in Condition 1.9.2 using the following methods described in Table 6 of Subpart ZZZZ. (§63.6640(a)):
  - 1.9.7.1 Conduct performance tests according to Condition 1.9.5 every 8,760 hours or 3 years, whichever comes first, to demonstrate that the required formaldehyde concentration or percent reduction is achieved; (Table 6 of Subpart ZZZZ, Item 10.a.i) and
  - 1.9.7.2 Collect the catalyst inlet temperature data according to §63.6625(b); (Table 6 of Subpart ZZZZ, Item 10.a.ii) and
  - 1.9.7.3 Reduce these data to 4-hour rolling averages; (Table 6 of Subpart ZZZZ, Item 10.a.iii) and
  - 1.9.7.4 Maintain the 4-hour rolling averages within the operating limitations for the catalyst inlet temperature; (Table 6 of Subpart ZZZZ, Item 10.a.iv) and
  - 1.9.7.5 Measure the pressure drop across the catalyst once per month and demonstrating that the pressure drop across the catalyst is within the operating limitation established during the performance test. (Table 6 of Subpart ZZZZ, Item 10.a.v)

### Notification and Reporting Requirements

- 1.9.8 Submit compliance reports semiannually according to the requirements in §63.6650(b). The report must contain the following:
  - 1.9.8.1 If there are no deviations from any emission limitations or operating limitations, include a statement that there were no deviations from the emission limitations or operating limitations during the reporting period. If there were no periods during which the CMS, including CEMS and CPMS, was out-of-control, as specified in §63.8(c)(7), include a statement that there were not periods during which the CMS was out-of-control during the reporting period. (Table 7 of Subpart ZZZZ, Item 1.a)
  - 1.9.8.2 If there is a deviation from any emission limitation or operating limitation during the reporting period, include the information in §63.6650(d). If there were

First Issued: June 1, 1999

- periods during which the CMS, including CEMS and CPMS, was out-of-control, as specified in §63.8(c)(7), include the information in §63.6650(e). (Table 7 of Subpart ZZZZ, Item 1.b)
- 1.9.8.3 If there was a malfunction during the reporting period, include the information in §63.6650(c)(4). (Table 7, Item 1.c)
- 1.9.9 Submit a Notification of Compliance Status according to §63.6645(h).
- 1.9.10 Submit all notifications that are applicable in §§63.7(b) and (c), 63.8(e), (f)(4) and (f)(6), 63.9(b) through (e), (g) and (h). (§63.6645(a))
- 1.9.11 Keep records of the maintenance conducted on the engine in order to demonstrate that the engine was operated and maintained according to the maintenance plan. (§66.6655(e)).

### General Requirements

- 1.9.12 Compliance with the emission limitations and operating limitations in this subpart must be achieved at all times. (§63.6605(a))
- 1.9.13 At all times the engines must be operated and maintained in a manner consistent with safety and good air pollution control practices for minimizing emissions. The general duty to minimize emissions does not require any further efforts to reduce emissions if levels required by this standard have been achieved. Determination of whether such operation and maintenance procedures are being used will be based on information available to the Division which may include, but is not limited to, monitoring results, review of operation and maintenance procedures, review of operation and maintenance records, and inspection of the source. (§63.6605(b))

#### Maintenance Requirements

- 1.9.14 Comply with the monitoring, installation, collection, and maintenance requirements in §63.6625.
- 1.9.15 Minimize the engine's time spent at idle during startup and minimize the engine's startup time to a period needed for appropriate and safe loading of the engine, not to exceed 30 minutes. (§63.6625(h))
- 1.10 **[Federal-Only]** These engines are subject to the requirements in 40 CFR Part 63 Subpart A "General Provisions", Section I as specified in 40 CFR Part 63 Subpart ZZZZ § 63.6665. These requirements include, but are not limited to the following:
  - 1.10.1 Prohibited activities and circumvention in §63.4.
  - 1.10.2 Performance testing in §63.7.
  - 1.10.3 Monitoring in §63.8.

First Issued: June 1, 1999

1.10.4 Notification in §63.9.

## 2. P-106 - Fugitive Emissions of VOCs from Equipment Leaks;

	Permit		Compliance Emission Factor	Monitori	ng
Parameter	Condition Number	Limitations		Method	Interval
VOC	2.1	36.02 tpy	By Component Type - EPA Protocol for Equipment Leak Estimates	Component Count, Recordkeeping, and Emission Calculations	Ongoing Tally, Annually

VOC emissions from equipment leaks shall not exceed the limitations stated above (as provided for under the provisions of Section I, Condition 1.3 and Colorado Regulation No. 3, Part A, Section I.B.36.h and Part C, Section III.B.7, based on maximum production rate identified in an APEN filed by the source dated 11/28/2011). Emissions shall be calculated using the emission factors and equations listed below. Emission Factors for individual types of components in lbs/component-hr from the reference <a href="Protocol for Equipment Leak Emission Estimates">Protocol for Equipment Leak Emission Estimates</a>, <a href="EPPA">EPPA-453/R-95-017</a>. These emission factors are fixed until changed by established permit modification procedures.

Component	Emission Factors (lb/component-hr)		
	Gas Service	Light Liquid	
Valves	$9.92 \times 10^{-3}$	$5.51 \times 10^{-3}$	
Connectors	$4.41 \times 10^{-4}$	$4.63 \times 10^{-4}$	
Flanges	$8.60 \times 10^{-4}$	$2.43 \times 10^{-4}$	
Pump Seals	5.29 × 10 <sup>-3</sup>	$2.87 \times 10^{-2}$	
Other*	$1.94 \times 10^{-2}$	$1.65 \times 10^{-2}$	

<sup>\*</sup>Other equipment type includes compressors, pressure relief valves, relief valves, diaphragms, drains, dump arms, hatches, instrument meters, polish rods, and vents.

Emissions of VOC per component:

Component count × 8760 hrs/year × VOC content (wt%) × Emission Factor × Control Factor

The total fugitive VOC emissions shall be the sum of emissions for each component.

- 2.1.1 The most recent gas analysis as required under Condition 3.1.2 of this Permit shall be used to determine the appropriate VOC content to use in the above equation.
- 2.1.2 Records shall be kept of all component additions and deletions and a running tally maintained. An actual physical hard count of the existing components shall be performed at least once every five calendar years.

# 3. P-112 Triethylene Glycol Dehydration Unit with condenser and flare; P-113 Triethylene Glycol Dehydration Unit with condenser and flare;

Note: These limitations apply to each dehydration unit individually.

	Permit		Compliance	Monite	oring
Parameter	Condition Number	Limitations	Emission Factor	Method	Interval
VOC Emissions	3.1	2.82 tons/yr	Based on GRI	Parametric	Daily
HAP Emissions		Facility wide: Each individual HAP: 8.0 tons per year	GlyCalc Model, Version 4.0 or	rsion 4.0 or	
		Total HAPs: 20.0 tons per year	Higher		
Extended Gas Analysis				EPA Reference Methods	Quarterly
Gas Processed	3.2	16,425 million scf per year		Recordkeeping	Monthly
Hours of Operation	3.3			Recordkeeping	Monthly
Flare Opacity	3.4	No visible emissions		EPA Method 22	Daily
Compliance Assurance Monitoring	3.5			See Cond	dition 4
Volatile Organic Compound Emissions from Oil and Gas Operations	3.6			See Condition 3.6	
Lean Glycol Recirculation Rate	3.7	6.25 gallons/minute		Recordkeeping	Weekly
NESHAP Subpart HH	3.8	< 1984 lb/yr benzene <b>or</b> < 3MMscf/day		See Condition 3.8	

- 3.1 Emissions of air pollutants from each dehydrator shall not exceed the limitations listed in the Summary Table 4 above. Compliance with the annual limits shall be determined on a rolling 12-month total. By the end of each month a new twelve month total is calculated based on the previous twelve months data. Monthly records of the actual emissions shall be maintained by the applicant and made available to the Division for inspection upon request. (Construction Permits 01WE0506 and 05WE0579, as modified under the provisions of Section I, Condition 1.3).
  - 3.1.1 VOC and HAP emissions shall be calculated monthly using the Gas Research Institute's GLYCalc Model, Version 4.0 or higher. Monitoring of the following parameters to be entered into the GLYCalc Model shall be monitored weekly: triethylene glycol circulation rate, flash tank temperature and pressure, and inlet (wet) gas pressure and temperature. Monitoring of the following parameters to be entered into the GLYCalc Model shall be monitored daily: condenser outlet temperature. The condenser outlet temperature recorded shall be the highest temperature reading

First Issued: June 1, 1999

recorded on the strip chart for any calendar day (midnight to midnight). Values of parameters shall be representative of the unit's operation during the month.

3.1.2 Samples of inlet gas shall be collected and analyzed (extended gas analysis) annually to determine C<sub>1</sub> to C<sub>6</sub>, n-hexane, benzene, toluene, ethyl benzene and total xylene (BTEX) composition. If any of the analyses indicates the BTEX constituent concentrations exceed the values listed in the table below, frequency of extended gas analyses will revert to quarterly. The first quarterly sample shall be taken three months after the sample that indicated a BTEX constituent exceeded the parameters in the table was taken. Frequency of sampling and analysis will move to semi-annually after four (4) subsequent analyses and to annually after two (2) subsequent semi-annual analyses indicate that the BTEX constituents remain at or below the values in the table below.

Component	Value	Criteria
Benzene Content of Gas	234.0 ppm	At or Below
Toluene Content of Gas	360.0 ppm	At or Below
Ethyl Benzene Content of Gas	20.0 ppm	At or Below
Xylene Content of Gas	270.0 ppm	At or Below

- 3.1.3 Flash gas emissions shall be vented back into the process at all times, resulting in zero emissions from the flash tank.
- 3.2 The gas processed by the glycol dehydration unit shall not exceed the limitations listed in Summary Table 3 above (Construction Permits 01WE0506 and 05WE0579, as modified under the provisions of Section I, Condition 1.3). The gas throughput to the dehydration unit shall be recorded monthly using existing flow meters. A twelve month rolling total will be maintained to monitor compliance with annual limitations. An average daily gas throughput rate shall be determined by dividing the monthly gas throughput by the number of operating days in the previous month. This average daily gas throughput rate shall be used in the monthly GLYCalc runs required by Condition 3.1.
- 3.3 The Hours/Days of Operation shall be monitored monthly and recorded and maintained to be made available to the Division upon request. The days of operation shall be used to calculate an average daily gas throughput to be used in the GLYCalc model runs as required by Condition 3.1.
- 3.4 **[State-only]** The flare shall be enclosed, have no visible emissions, and be designed so that an observer can, by means of visual observation from the outside of the enclosed flare or combustion device, or by other convenient means approved by the division, determine whether it is operating properly. (Colorado Regulation No. 7, Section XVII.B.1.c)

First Issued: June 1, 1999

Compliance shall be monitored by conducting EPA Method 22 observations for one minute daily. The result(s) of the visual observations shall be kept on file and made available for Division review upon request.

- 3.5 The source shall follow the Compliance Assurance Monitoring (CAM) requirements as outlined in Section II, Condition 4 of this permit.
- 3.6 Any still vent and flash separator or flash tank shall reduce uncontrolled actual emissions of VOCs by an average of at least 90 percent through the use of air pollution control equipment. (Colorado Regulation No. 7, Section XII.H)
  - 3.6.1 **[State-only]** All air pollution control equipment shall be operated and maintained pursuant to manufacturer specifications or equivalent to the extent practicable, and consistent with technological limitations and good engineering and maintenance practices. The owner or operator shall keep manufacturer specifications or equivalent on file. In addition, all such air pollution control equipment shall be adequately designed and sized to achieve the required control efficiency rates and to handle reasonably foreseeable fluctuations in emissions of volatile organic compounds. (Colorado Regulation No. 7, Section XVII.B.1.a)
- 3.7 The maximum pumping rate of lean glycol shall not exceed 6.25 gallons per minute. The actual pumping rate shall be recorded on a weekly basis. Records shall be made available for Division review upon request. (Construction Permits 01WE0506 and 05WE0579, as modified under the provisions of Section I, Condition 1.3)
- 3.8 This source is subject to 40 CFR Part 63 Subpart HH National Emission Standards for Hazardous Air Pollutants for Source Categories from Oil and Natural Gas Production Facilities. The following requirements apply:
  - 3.8.1 These dehydrators are exempt from all requirements, save recordkeeping in §63.774(d)(1), provided the criterion in Condition 3.8.1.1 or 3.8.1.2 below is met: (§63.764(e)(1))
    - 3.8.1.1 The actual average emissions of benzene from the glycol dehydration unit process vent to the atmosphere shall be less than 0.90 megagram per year, or 1984 lbs per year, as determined by the procedures specified in Condition 3.8.3 (§63.764 (e)(1)(ii)). **OR**
    - 3.8.1.2 The actual annual average flowrate of natural gas to the glycol dehydration unit is less than 85 thousand standard cubic meters per day (3.0 MMSCF/day), as determined by the procedures specified in Condition 3.8.4 (§63.764(e)(1)(i).)
  - 3.8.2 Records shall be kept of the actual average benzene emissions (in terms of benzene emissions per year) as determined in accordance with Condition 3.8.3 §63.772(b)(2) (§63.774(d)(1)(ii)).

First Issued: June 1, 1999

- 3.8.3 The determination of actual average benzene emissions from this glycol dehydration unit shall be made using the procedure described in Condition 3.8.3.1 below. Emissions shall be determined with federally enforceable controls in place.
  - 3.8.3.1 The actual average benzene emissions shall be determined using the model GRI-GLYCalc, Version 3.0 or higher, and the procedures presented in the associated GRI-GLYCalc, Technical Reference Manual. Inputs to the model shall be representative of actual operating conditions of the glycol dehydration unit and may be determined using the procedures documented in the Gas Research Institute (GRI) report entitled "Atmospheric Rich/Lean Method for Determining Glycol Dehydrator Emissions" (GRI–95/0368.1) (§63.772(b)(2)(i)).
- 3.8.4 The determination of actual flowrate of natural gas to the glycol dehydration unit shall be made using the procedure described in Condition 3.8.4.1 below.
  - 3.8.4.1 The facility shall install and operate a monitoring instrument that directly measures natural gas flowrate to the glycol dehydration unit with an accuracy of plus or minus 2 percent or better. The source shall convert annual natural gas flowrate to a daily average by dividing the annual flowrate by the number of days per year the glycol dehydration unit processed natural gas. (§63.722(b)(1)(i))

# 4. Compliance Assurance Monitoring

- 4.1 The Compliance Assurance Monitoring (CAM) requirements in 40 CFR Part 64, as adopted by reference in Colorado Regulation No. 3, Part C, Section XIV, apply to the three Waukesha Model L-7042 GSI and the three Model L-7044 GSI engines with respect to the NO<sub>X</sub> and CO limitations identified in Section II, Condition 1.1, and the two glycol dehydration units with respect to VOC and HAP limitations identified in Section II, Condition 3.1 as follows:
  - 4.1.1 For the engines, the permittee shall follow the CAM Plan provided in Appendix G of this permit. Excursions, for purposes of reporting, are any time the thermocouple temperature indicates a temperature less than 750° F or greater than 1250° F, or a pressure drop across the catalyst of more than 3 inches of water from the pressure drop measured during the performance test. Excursions shall be reported as required by Section IV, Conditions 21 and 22.d of this permit.
  - 4.1.2 For the glycol dehydration units, the permittee shall follow the CAM Plan provided in Appendix H of this permit. Excursions, for purposes of reporting are any calendar day (midnight to midnight) in which the average condenser outlet temperature exceeds 140° F, or the absence of a flame within the flare. Excursions shall be reported as required by Section IV, Conditions 21 and 22.d of this permit.
  - 4.1.3 Operation of Approved Monitoring
    - 4.1.3.1 At all times, the owner or operator shall maintain the monitoring, including but not limited to, maintaining necessary parts for routine repairs of the monitoring equipment (40 CFR Part 64 § 64.7(b), as adopted

First Issued: June 1, 1999

by reference in Colorado Regulation No. 3, Part C, Section XIV).

4.1.3.2 Except for, as applicable, monitoring malfunctions, associated repairs, and required quality assurance or control activities (including, as applicable, calibration checks and required zero and span adjustments), the owner or operator shall conduct all monitoring in continuous operation (or shall collect data at all required intervals) at all times that the pollutant-specific emissions unit is operating. Data recorded during monitoring malfunctions, associated repairs, and required quality assurance or control activities shall not be used for purposes of these CAM requirements. including data averages and calculations, or fulfilling a minimum data availability requirement, if applicable. The owner or operator shall use all the data collected during all other periods in assessing the operation of the control device and associated control system. A monitoring malfunction is any sudden, infrequent, not reasonably preventable failure of the monitoring to provide valid data. Monitoring failures that are caused in part by poor maintenance or careless operation are not malfunctions (40 CFR Part 64 § 64.7(c), as adopted by reference in Colorado Regulation No. 3, Part C, Section XIV).

### 4.1.3.3 Response to excursions or exceedances

- a. Upon detecting an excursion or exceedance, the owner or operator shall restore operation of the pollutant-specific emissions unit (including the control device and associated capture system) to its normal or usual manner of operation as expeditiously as practicable in accordance with good air pollution control practices for minimizing emissions. The response shall include minimizing the period of any startup, shutdown or malfunction and taking any necessary corrective actions to restore normal operation and prevent the likely recurrence of the cause of an excursion or exceedance (other than those caused by excused startup or shutdown conditions). Such actions may include initial inspection and evaluation, recording that operations returned to normal without operator action (such as through response by a computerized distribution control system), or any necessary follow-up actions to return operation to within the indicator range, designated condition, or below the applicable emission limitation or standard, as applicable (40 CFR Part 64 § 64.7(d)(1), as adopted by reference in Colorado Regulation No. 3, Part C, Section XIV).
- b. Determination of whether the owner of operator has used acceptable procedures in response to an excursion or exceedance will be based on information available, which may include but is not limited to, monitoring results, review of operation and maintenance procedures and records, and inspection of the control device, associated capture system, and the process (40 CFR Part 64 § 64.7(d)(2), as adopted by reference in Colorado Regulation No. 3, Part C, Section XIV).

- 4.1.3.4 After approval of the monitoring required under the CAM requirements, if the owner or operator identifies a failure to achieve compliance with an emission limitation or standard for which the approved monitoring did not provide an indication of an excursion or exceedance while providing valid data, or the results of compliance or performance testing document a need to modify the existing indicator ranges or designated conditions, the owner or operator shall promptly notify the Division and, if necessary submit a proposed modification for this permit to address the necessary monitoring changes. Such a modification may include, but is not limited to, reestablishing indicator ranges or designated conditions, modifying the frequency of conducting monitoring and collecting data, or the monitoring of additional parameters (40 CFR Part 64 § 64.7(e), as adopted by reference in Colorado Regulation No. 3, Part C, Section XIV).
- 4.1.4 Quality Improvement Plan (QIP) Requirements
  - 4.1.4.1 Based on the results of a determination made under the provisions of Condition 4.1.3.3.b, the Division may require the owner or operator to develop and implement a QIP (40 CFR Part 64 § 64.8(a), as adopted by reference in Colorado Regulation No. 3, Part C, Section XIV).
  - 4.1.4.2 The owner or operator shall maintain a written QIP, if required, and have it available for inspection (40 CFR Part 64 § 64.8(b)(1), as adopted by reference in Colorado Regulation No. 3, Part C, Section XIV).
  - 4.1.4.3 The QIP initially shall include procedures for evaluating the control performance problems and, based on the results of the evaluation procedures, the owner or operator shall modify the plan to include procedures for conducting one or more of the following actions, as appropriate:
    - a. Improved preventative maintenance practices (40 CFR Part 64 § 64.8(b)(2)(i), as adopted by reference in Colorado Regulation No. 3, Part C, Section XIV).
    - b. Process operation changes (40 CFR Part 64 § 64.8(b)(2)(ii), as adopted by reference in Colorado Regulation No. 3, Part C, Section XIV).
    - c. Appropriate improvements to control methods (40 CFR Part 64 § 64.8(b)(2)(iii), as adopted by reference in Colorado Regulation No. 3, Part C, Section XIV).
    - d. Other steps appropriate to correct control performance (40 CFR Part 64 § 64.8(b)(2)(iv), as adopted by reference in Colorado Regulation No. 3, Part C, Section XIV).
    - e. More frequent or improved monitoring (only in conjunction with one or more steps under Conditions 4.1.4.3.a through d above) (40 CFR Part 64 § 64.8(b)(2)(v), as adopted by reference in Colorado Regulation No. 3, Part C, Section XIV).

- 4.1.4.4 If a QIP is required, the owner or operator shall develop and implement a QIP as expeditiously as practicable and shall notify the Division if the period for completing the improvements contained in the QIP exceeds 180 days from the date on which the need to implement the QIP was determined (40 CFR Part 64 § 64.8(c), as adopted by reference in Colorado Regulation No. 3, Part C, Section XIV).
- 4.1.4.5 Following implementation of a QIP, upon any subsequent determination pursuant to Condition 4.1.3.3.b, the Division or the U.S. EPA may require that an owner or operator make reasonable changes to the QIP if the QIP is found to have:
  - a. Failed to address the cause of the control device performance problems (40 CFR Part 64 § 64.8(d)(1), as adopted by reference in Colorado Regulation No. 3, Part C, Section XIV); or
  - b. Failed to provide adequate procedures for correcting control device performance problems as expeditiously as practicable in accordance with good air pollution control practices for minimizing emissions (40 CFR Part 64 § 64.8(d)(2), as adopted by reference in Colorado Regulation No. 3, Part C, Section XIV).
- 4.1.4.6 Implementation of a QIP shall not excuse the owner or operator of a source from compliance with any existing emission limitation or standard, or any existing monitoring, testing, reporting or recordkeeping requirement that may apply under federal, state, or local law, or any other applicable requirements under the federal clean air act (40 CFR Part 64 § 64.8(e), as adopted by reference in Colorado Regulation No. 3, Part C, Section XIV).
- 4.1.5 Reporting and Recordkeeping Requirements
  - 4.1.5.1 <u>Reporting Requirements:</u> The reports required by Section IV, Condition 22.d, shall contain the information specified in Appendix B of the permit and the following information, as applicable:
    - a. Summary information on the number, duration and cause (including unknown cause, if applicable), for monitor downtime incidents (other than downtime associated with zero and span or other daily calibration checks, if applicable) ((40 CFR Part 64 § 64.9(a)(2)(ii), as adopted by reference in Colorado Regulation No. 3, Part C, Section XIV); and
    - b. The owner or operator shall submit, if necessary, a description of the actions taken to implement a QIP during the reporting period as specified in Condition 4.1.3 of this permit. Upon completion of a QIP, the owner or operator shall include in the next summary report documentation that the implementation of the plan has been completed and reduced the likelihood of similar levels of excursions or

exceedances occurring (40 CFR Part 64 § 64.9(a)(2)(iii), as adopted by reference in Colorado Regulation No. 3, Part C, Section XIV).

- 4.1.5.2 <u>General Recordkeeping Requirements</u>: In addition to the recordkeeping requirements in Section IV, Condition 22.a through c.
  - a. The owner or operator shall maintain records of any written QIP required pursuant to Condition 4.1.3 and any activities undertaken to implement a QIP, and any supporting information required to be maintained under these CAM requirements (such as data used to document the adequacy of monitoring, or records of monitoring maintenance or corrective actions) (40 CFR Part 64 § 64.9(b)(1), as adopted by reference in Colorado Regulation No. 3, Part C, Section XIV).
  - b. Instead of paper records, the owner or operator may maintain records on alternative media, such as microfilm, computer files, magnetic tape disks, or microfiche, provided that the use of such alternative media allows for expeditious inspection and review, and does not conflict with other applicable recordkeeping requirements (40 CFR Part 64 § 64.9(b)(2), as adopted by reference in Colorado Regulation No. 3, Part C, Section XIV).

#### 4.1.6 Savings Provisions

- 4.1.6.1 Nothing in these CAM requirements shall excuse the owner or operator of a source from compliance with any existing emission limitation or standard, or any existing monitoring, testing, reporting or recordkeeping requirement that may apply under federal, state, or local law, or any other applicable requirements under the federal clean air act. These CAM requirements shall not be used to justify the approval of monitoring less stringent than the monitoring which is required under separate legal authority and are not intended to establish minimum requirements for the purposes of determining the monitoring to be imposed under separate authority under the federal clean air act, including monitoring in permits issued pursuant to title I of the federal clean air act. The purpose of the CAM requirements is to require, as part of the issuance of this Title V operating permit, improved or new monitoring at those emissions units where monitoring requirements do not exist or are inadequate to meet the requirements of CAM (40 CFR Part 64 § 64.10(a)(1), as adopted by reference in Colorado Regulation No. 3, Part C, Section XIV).
- 4.1.6.2 Nothing in these CAM requirements shall restrict or abrogate the authority of the U.S. EPA or the Division to impose additional or more stringent monitoring, recordkeeping, testing or reporting requirements on any owner or operator of a source under any provision of the federal clean air act, including but not limited to sections 114(a)(1) and 504(b), or state law, as applicable (40 CFR Part 64 § 64.10(a)(2), as adopted by reference in

Colorado Regulation No. 3, Part C, Section XIV).

4.1.6.3 Nothing in these CAM requirements shall restrict or abrogate the authority of the U.S. EPA or the Division to take any enforcement action under the federal clean air act for any violation of an applicable requirement or of any person to take action under section 304 of the federal clean air act (40 CFR Part 64 § 64.10(a)(2), as adopted by reference in Colorado Regulation No. 3, Part C, Section XIV)

#### **SECTION III - Permit Shield**

Regulation No. 3, 5 CCR 1001-5, Part C, §§ I.A.4, V.D. & XIII.B; § 25-7-114.4(3)(a), C.R.S.

### 1. Specific Non-Applicable Requirements

Based on the information available to the Division and supplied by the applicant, the following parameters and requirements have been specifically identified as non-applicable to the facility to which this permit has been issued. This shield does not protect the source from any violations that occurred prior to or at the time of permit issuance. In addition, this shield does not protect the source from any violations that occur as a result of any modifications or reconstruction on which construction commenced prior to permit issuance.

Emission Unit Description & Number	Applicable Requirement	Justification
C-148 Waukesha L-7042 GSI 1478 HP C-135 Waukesha L-7042 GSI 1478 HP C-151 Waukesha L-7042 GSI 1478 HP C-166 Waukesha L-7044 GSI 1680 HP C-174 Waukesha L-7044 GSI 1680 HP C-176 Waukesha L-7044 GSI 1680 HP	Reg 1.III.A.1.b - Particulate emissions from fuel-burning equipment Reg 1.VI.B.5.a - Sulfur dioxide emissions from fuel-burning equipment	Internal combustion engines are not considered fuel burning equipment for the applicable requirements of Regulation 1.
Station-wide	Reg 4 - Wood Burning Stoves	This Station does not include any wood burning stoves or wood burning appliances, or advertise, or sell such devices.
	Reg 6 Part A - Adoption of Federal NSPS Requirements	None of these provisions currently apply to any of the sources at the Station.
	Reg 6 Part B - State Only NSPS Requirements	None of these State-only provisions currently apply to any of the sources at the Station.
	Reg 7 V.C	The Station is not a gasoline terminal, bulk gasoline Station or the type of gasoline dispensing Station subject to the provisions.
Station-wide	Reg 7 VI.B.1 Reg 7 VI.B.2 Storage of Petroleum Distillates	These provisions apply to the storage of petroleum liquids in tanks with greater than 40,000 gallons capacity.
	Reg 7 VII.C - Crude Oil Storage	These provision apply to the storage of crude oil in tanks with greater than 40,000 gallons capacity.
	Reg 10 - SIP Rules	Conformity of federal actions to SIPs and FIPs

#### 2. General Conditions

Compliance with this Operating Permit shall be deemed compliance with all applicable requirements specifically identified in the permit and other requirements specifically identified in the permit as not applicable to the source. This permit shield shall not alter or affect the following:

- 2.1 The provisions of §§ 25-7-112 and 25-7-113, C.R.S., or § 303 of the federal act, concerning enforcement in cases of emergency;
- 2.2 The liability of an owner or operator of a source for any violation of applicable requirements prior to or at the time of permit issuance;
- 2.3 The applicable requirements of the federal Acid Rain Program, consistent with § 408(a) of the federal act;
- 2.4 The ability of the Air Pollution Control Division to obtain information from a source pursuant to § 25-7-111(2)(I), C.R.S., or the ability of the Administrator to obtain information pursuant to § 114 of the federal act;
- 2.5 The ability of the Air Pollution Control Division to reopen the Operating Permit for cause pursuant to Regulation No. 3, Part C, § XIII.
- 2.6 Sources are not shielded from terms and conditions that become applicable to the source subsequent to permit issuance.

#### 3. Stream-lined Conditions

The following applicable requirements have been subsumed within this operating permit using the pertinent streamlining procedures approved by the U.S. EPA. For purposes of the permit shield, compliance with the listed permit conditions will also serve as a compliance demonstration for purposes of the associated subsumed requirements.

Permit Condition	Streamlined (Subsumed) Requirements		
Section II, Condition 1.1	Colorado Regulation No. 7, Section XVII.E.2.b [emission standards] – <b>State Only Requirement</b> – for engines C-135 and C-151 only until compliance with Condition 1.9		
Section II, Condition 1.9	Colorado Regulation No. 7, Section XVII.E.3.b.(i) [control requirements] – State Only Requirement – for engines C-148, C-166, C-174, and C-176 only until compliance with Condition 1.9		
Section II, Condition 3.5	Colorado Regulation No. 1, Section II.A.5 [opacity limit]		
Section II, Condition 3.7	Colorado Regulation No. 7, Section XVII.D [dehy control requirements] – <b>State-only</b>		

### **SECTION IV - General Permit Conditions (5/22/2012)**

#### 1. Administrative Changes

#### Regulation No. 3, 5 CCR 1001-5, Part A, § III.

The permittee shall submit an application for an administrative permit amendment to the Division for those permit changes that are described in Regulation No. 3, Part A, § I.B.1. The permittee may immediately make the change upon submission of the application to the Division.

#### 2. Certification Requirements

#### Regulation No. 3, 5 CCR 1001-5, Part C, §§ III.B.9., V.C.16.a.& e. and V.C.17.

- a. Any application, report, document and compliance certification submitted to the Air Pollution Control Division pursuant to Regulation No. 3 or the Operating Permit shall contain a certification by a responsible official of the truth, accuracy and completeness of such form, report or certification stating that, based on information and belief formed after reasonable inquiry, the statements and information in the document are true, accurate and complete.
- b. All compliance certifications for terms and conditions in the Operating Permit shall be submitted to the Air Pollution Control Division at least annually unless a more frequent period is specified in the applicable requirement or by the Division in the Operating Permit.
- c. Compliance certifications shall contain:
  - (i) the identification of each permit term and condition that is the basis of the certification;
  - (ii) the compliance status of the source;
  - (iii) whether compliance was continuous or intermittent;
  - (iv) method(s) used for determining the compliance status of the source, currently and over the reporting period; and
  - (v) such other facts as the Air Pollution Control Division may require to determine the compliance status of the source.
- d. All compliance certifications shall be submitted to the Air Pollution Control Division and to the Environmental Protection Agency at the addresses listed in Appendix D of this Permit.
- e. If the permittee is required to develop and register a risk management plan pursuant to § 112(r) of the federal act, the permittee shall certify its compliance with that requirement; the Operating Permit shall not incorporate the contents of the risk management plan as a permit term or condition.

#### 3. Common Provisions

#### Common Provisions Regulation, 5 CCR 1001-2 §§ II.A., II.B., II.C., II.E., II.F., II.I, and II.J

a. To Control Emissions Leaving Colorado

When emissions generated from sources in Colorado cross the State boundary line, such emissions shall not cause the air quality standards of the receiving State to be exceeded, provided reciprocal action is taken by the receiving State. b. Emission Monitoring Requirements

The Division may require owners or operators of stationary air pollution sources to install, maintain, and use instrumentation to monitor and record emission data as a basis for periodic reports to the Division.

c. Performance Testing

The owner or operator of any air pollution source shall, upon request of the Division, conduct performance test(s) and furnish the Division a written report of the results of such test(s) in order to determine compliance with applicable emission control regulations.

Performance test(s) shall be conducted and the data reduced in accordance with the applicable reference test methods unless the Division:

- (i) specifies or approves, in specific cases, the use of a test method with minor changes in methodology;
- (ii) approves the use of an equivalent method;
- (iii) approves the use of an alternative method the results of which the Division has determined to be adequate for indicating where a specific source is in compliance; or
- (iv) waives the requirement for performance test(s) because the owner or operator of a source has demonstrated by other means to the Division's satisfaction that the affected facility is in compliance with the standard. Nothing in this paragraph shall be construed to abrogate the Commission's or Division's authority to require testing under the Colorado Revised Statutes, Title 25, Article 7, and pursuant to regulations promulgated by the Commission.

Compliance test(s) shall be conducted under such conditions as the Division shall specify to the plant operator based on representative performance of the affected facility. The owner or operator shall make available to the Division such records as may be necessary to determine the conditions of the performance test(s). Operations during period of startup, shutdown, and malfunction shall not constitute representative conditions of performance test(s) unless otherwise specified in the applicable standard.

The owner or operator of an affected facility shall provide the Division thirty days prior notice of the performance test to afford the Division the opportunity to have an observer present. The Division may waive the thirty day notice requirement provided that arrangements satisfactory to the Division are made for earlier testing.

The owner or operator of an affected facility shall provide, or cause to be provided, performance testing facilities as follows:

- (i) Sampling ports adequate for test methods applicable to such facility;
- (ii) Safe sampling platform(s);
- (iii) Safe access to sampling platform(s); and
- (iv) Utilities for sampling and testing equipment.

Each performance test shall consist of at least three separate runs using the applicable test method. Each run shall be conducted for the time and under the conditions specified in the applicable standard. For the purpose of determining compliance with an applicable standard, the arithmetic mean of results of at least three runs shall apply. In the event that a sample is accidentally lost or conditions occur in which one of the runs must be discontinued because of forced shutdown, failure of an irreplaceable portion of the sample train, extreme meteorological conditions, or other circumstances beyond the owner or operator's control, compliance may, upon the Division's approval, be determined using the arithmetic mean of the results of the two other runs.

Nothing in this section shall abrogate the Division's authority to conduct its own performance test(s) if so warranted.

d. Affirmative Defense Provision for Excess Emissions during Malfunctions

An affirmative defense to a claim of violation under these regulations is provided to owners and operators for civil penalty actions for excess emissions during periods of malfunction. To establish the affirmative defense and to be relieved of a civil penalty in any action to enforce an applicable requirement, the owner or operator of the facility must meet the notification requirements below in a timely manner and prove by a preponderance of evidence that:

- (i) The excess emissions were caused by a sudden, unavoidable breakdown of equipment, or a sudden, unavoidable failure of a process to operate in the normal or usual manner, beyond the reasonable control of the owner or operator;
- (ii) The excess emissions did not stem from any activity or event that could have reasonably been foreseen and avoided, or planned for, and could not have been avoided by better operation and maintenance practices;
- (iii) Repairs were made as expeditiously as possible when the applicable emission limitations were being exceeded;
- (iv) The amount and duration of the excess emissions (including any bypass) were minimized to the maximum extent practicable during periods of such emissions;
- (v) All reasonably possible steps were taken to minimize the impact of the excess emissions on ambient air quality;
- (vi) All emissions monitoring systems were kept in operation (if at all possible);
- (vii) The owner or operator's actions during the period of excess emissions were documented by properly signed, contemporaneous operating logs or other relevant evidence;
- (viii) The excess emissions were not part of a recurring pattern indicative of inadequate design, operation, or maintenance;
- (ix) At all times, the facility was operated in a manner consistent with good practices for minimizing emissions. This section is intended solely to be a factor in determining whether an affirmative defense is available to an owner or operator, and shall not constitute an additional applicable requirement; and
- (x) During the period of excess emissions, there were no exceedances of the relevant ambient air quality standards established in the Commissions' Regulations that could be attributed to the emitting source.

The owner or operator of the facility experiencing excess emissions during a malfunction shall notify the division verbally as soon as possible, but no later than noon of the Division's next working day, and shall submit written notification following the initial occurrence of the excess emissions by the end of the source's next reporting period. The notification shall address the criteria set forth above.

The Affirmative Defense Provision contained in this section shall not be available to claims for injunctive relief.

The Affirmative Defense Provision does not apply to failures to meet federally promulgated performance standards or emission limits, including, but not limited to, new source performance standards and national emission standards for hazardous air pollutants. The affirmative defense provision does not apply to state implementation plan (sip) limits or permit limits that have been set taking into account potential emissions during malfunctions, including, but not necessarily limited to, certain limits with 30-day or longer averaging times, limits that indicate they apply during malfunctions, and limits that indicate they apply at all times or without exception.

### e. Circumvention Clause

A person shall not build, erect, install, or use any article, machine, equipment, condition, or any contrivance, the use of which, without resulting in a reduction in the total release of air pollutants to the atmosphere, reduces or conceals an emission which would otherwise constitute a violation of this regulation. No person shall circumvent this regulation by using more openings than is considered normal practice by the industry or activity in question.

## f. Compliance Certifications

For the purpose of submitting compliance certifications or establishing whether or not a person has violated or is in violation of any standard in the Colorado State Implementation Plan, nothing in the Colorado State Implementation Plan shall preclude the use, including the exclusive use, of any credible evidence or information, relevant to whether a source would have been in compliance with applicable requirements if the appropriate performance or compliance test or procedure had been performed. Evidence that has the effect of making any relevant standard or permit term more stringent shall not be credible for proving a violation of the standard or permit term.

When compliance or non-compliance is demonstrated by a test or procedure provided by permit or other applicable requirement, the owner or operator shall be presumed to be in compliance or non-compliance unless other relevant credible evidence overcomes that presumption.

g. Affirmative Defense Provision for Excess Emissions During Startup and Shutdown

An affirmative defense is provided to owners and operators for civil penalty actions for excess emissions during periods of startup and shutdown. To establish the affirmative defense and to be relieved of a civil penalty in any action to enforce an applicable requirement, the owner or operator of the facility must meet the notification requirements below in a timely manner and prove by a preponderance of the evidence that:

- (i) The periods of excess emissions that occurred during startup and shutdown were short and infrequent and could not have been prevented through careful planning and design;
- (ii) The excess emissions were not part of a recurring pattern indicative of inadequate design, operation or maintenance;
- (iii) If the excess emissions were caused by a bypass (an intentional diversion of control equipment), then the bypass was unavoidable to prevent loss of life, personal injury, or severe property damage;
- (iv) The frequency and duration of operation in startup and shutdown periods were minimized to the maximum extent practicable;
- (v) All possible steps were taken to minimize the impact of excess emissions on ambient air quality;
- (vi) All emissions monitoring systems were kept in operation (if at all possible);
- (vii) The owner or operator's actions during the period of excess emissions were documented by properly signed, contemporaneous operating logs or other relevant evidence; and,
- (viii) At all times, the facility was operated in a manner consistent with good practices for minimizing emissions. This subparagraph is intended solely to be a factor in determining whether an affirmative defense is available to an owner or operator, and shall not constitute an additional applicable requirement.

The owner or operator of the facility experiencing excess emissions during startup and shutdown shall notify the Division verbally as soon as possible, but no later than two (2) hours after the start of the next working day, and shall submit written quarterly notification following the initial occurrence of the excess emissions. The notification shall address the criteria set forth above.

The Affirmative Defense Provision contained in this section shall not be available to claims for injunctive relief.

The Affirmative Defense Provision does not apply to State Implementation Plan provisions or other requirements that derive from new source performance standards or national emissions standards for hazardous air pollutants, or any other federally enforceable performance standard or emission limit with an averaging time greater than twenty-four hours. In addition, an affirmative defense cannot be used by a single source or small group of sources where the excess emissions have the potential to cause an exceedance of the ambient air quality standards or Prevention of Significant Deterioration (PSD) increments.

In making any determination whether a source established an affirmative defense, the Division shall consider the information within the notification required above and any other information the Division deems necessary, which may include, but is not limited to, physical inspection of the facility and review of documentation pertaining to the maintenance and operation of process and air pollution control equipment.

### 4. Compliance Requirements

# Regulation No. 3, 5 CCR 1001-5, Part C, §§ III.C.9., V.C.11. & 16.d. and § 25-7-122.1(2), C.R.S.

- a. The permittee must comply with all conditions of the Operating Permit. Any permit noncompliance relating to federally-enforceable terms or conditions constitutes a violation of the federal act, as well as the state act and Regulation No. 3. Any permit noncompliance relating to state-only terms or conditions constitutes a violation of the state act and Regulation No. 3, shall be enforceable pursuant to state law, and shall not be enforceable by citizens under § 304 of the federal act. Any such violation of the federal act, the state act or regulations implementing either statute is grounds for enforcement action, for permit termination, revocation and reissuance or modification or for denial of a permit renewal application.
- b. It shall not be a defense for a permittee in an enforcement action or a consideration in favor of a permittee in a permit termination, revocation or modification action or action denying a permit renewal application that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of the permit.
- c. The permit may be modified, revoked, reopened, and reissued, or terminated for cause. The filing of any request by the permittee for a permit modification, revocation and reissuance, or termination, or any notification of planned changes or anticipated noncompliance does not stay any permit condition, except as provided in §§ X. and XI. of Regulation No. 3, Part C.
- d. The permittee shall furnish to the Air Pollution Control Division, within a reasonable time as specified by the Division, any information that the Division may request in writing to determine whether cause exists for modifying, revoking and reissuing, or terminating the permit or to determine compliance with the permit. Upon request, the permittee shall also furnish to the Division copies of records required to be kept by the permittee, including information claimed to be confidential. Any information subject to a claim of confidentiality shall be specifically identified and submitted separately from information not subject to the claim.
- e. Any schedule for compliance for applicable requirements with which the source is not in compliance at the time of permit issuance shall be supplemental, and shall not sanction noncompliance with, the applicable requirements on which it is based.
- f. For any compliance schedule for applicable requirements with which the source is not in compliance at the time of permit issuance, the permittee shall submit, at least every 6 months unless a more frequent period is specified in the applicable requirement or by the Air Pollution Control Division, progress reports which contain the following:
  - (i) dates for achieving the activities, milestones, or compliance required in the schedule for compliance, and dates when such activities, milestones, or compliance were achieved; and
  - (ii) an explanation of why any dates in the schedule of compliance were not or will not be met, and any preventive or corrective measures adopted.

Operating Permit 95OPWE020

First Issued: June 1, 1999

g. The permittee shall not knowingly falsify, tamper with, or render inaccurate any monitoring device or method required to be maintained or followed under the terms and conditions of the Operating Permit.

### 5. Emergency Provisions

### Regulation No. 3, 5 CCR 1001-5, Part C, § VII.E

An emergency means any situation arising from sudden and reasonably unforeseeable events beyond the control of the source, including acts of God, which situation requires immediate corrective action to restore normal operation, and that causes the source to exceed the technology-based emission limitation under the permit due to unavoidable increases in emissions attributable to the emergency. "Emergency" does not include noncompliance to the extent caused by improperly designed equipment, lack of preventative maintenance, careless or improper operation, or operator error. An emergency constitutes an affirmative defense to an enforcement action brought for noncompliance with a technology-based emission limitation if the permittee demonstrates, through properly signed, contemporaneous operating logs, or other relevant evidence that:

- a. an emergency occurred and that the permittee can identify the cause(s) of the emergency;
- b. the permitted facility was at the time being properly operated;
- c. during the period of the emergency the permittee took all reasonable steps to minimize levels of emissions that exceeded the emission standards, or other requirements in the permit; and
- d. the permittee submitted oral notice of the emergency to the Air Pollution Control Division no later than noon of the next working day following the emergency, and followed by written notice within one month of the time when emissions limitations were exceeded due to the emergency. This notice must contain a description of the emergency, any steps taken to mitigate emissions, and corrective actions taken.

This emergency provision is in addition to any emergency or malfunction provision contained in any applicable requirement.

### 6. Emission Controls for Asbestos

### Regulation No. 8, 5 CCR 1001-10, Part B

The permittee shall not conduct any asbestos abatement activities except in accordance with the provisions of Regulation No. 8, Part B, "asbestos control."

### 7. Emissions Trading, Marketable Permits, Economic Incentives

### Regulation No. 3, 5 CCR 1001-5, Part C, § V.C.13.

No permit revision shall be required under any approved economic incentives, marketable permits, emissions trading and other similar programs or processes for changes that are specifically provided for in the permit.

### 8. Fee Payment

### C.R.S §§ 25-7-114.1(6) and 25-7-114.7

- a. The permittee shall pay an annual emissions fee in accordance with the provisions of C.R.S. § 25-7-114.7. A 1% per month late payment fee shall be assessed against any invoice amounts not paid in full on the 91st day after the date of invoice, unless a permittee has filed a timely protest to the invoice amount.
- b. The permittee shall pay a permit processing fee in accordance with the provisions of C.R.S. § 25-7-114.7. If the Division estimates that processing of the permit will take more than 30 hours, it will notify the permittee of its estimate of what the actual charges may be prior to commencing any work exceeding the 30 hour limit.

First Issued: June 1, 1999

c. The permittee shall pay an APEN fee in accordance with the provisions of C.R.S. § 25-7-114.1(6) for each APEN or revised APEN filed.

### 9. Fugitive Particulate Emissions

### Regulation No. 1, 5 CCR 1001-3, § III.D.1.

The permittee shall employ such control measures and operating procedures as are necessary to minimize fugitive particulate emissions into the atmosphere, in accordance with the provisions of Regulation No. 1, § III.D.1.

### 10. Inspection and Entry

### Regulation No. 3, 5 CCR 1001-5, Part C, § V.C.16.b.

Upon presentation of credentials and other documents as may be required by law, the permittee shall allow the Air Pollution Control Division, or any authorized representative, to perform the following:

- a. enter upon the permittee's premises where an Operating Permit source is located, or emissions-related activity is conducted, or where records must be kept under the terms of the permit;
- b. have access to, and copy, at reasonable times, any records that must be kept under the conditions of the permit;
- c. inspect at reasonable times any facilities, equipment (including monitoring and air pollution control equipment), practices, or operations regulated or required under the Operating Permit;
- d. sample or monitor at reasonable times, for the purposes of assuring compliance with the Operating Permit or applicable requirements, any substances or parameters.

#### 11. Minor Permit Modifications

### Regulation No. 3, 5 CCR 1001-5, Part C, §§ X. & XI.

The permittee shall submit an application for a minor permit modification before making the change requested in the application. The permit shield shall not extend to minor permit modifications.

### 12. New Source Review

### Regulation No. 3, 5 CCR 1001-5, Part B

The permittee shall not commence construction or modification of a source required to be reviewed under the New Source Review provisions of Regulation No. 3, Part B, without first receiving a construction permit.

### 13. No Property Rights Conveyed

### Regulation No. 3, 5 CCR 1001-5, Part C, § V.C.11.d.

This permit does not convey any property rights of any sort, or any exclusive privilege.

#### 14. Odor

### Regulation No. 2, 5 CCR 1001-4, Part A

As a matter of state law only, the permittee shall comply with the provisions of Regulation No. 2 concerning odorous emissions.

First Issued: June 1, 1999

# 15. Off-Permit Changes to the Source

# Regulation No. 3, 5 CCR 1001-5, Part C, § XII.B.

The permittee shall record any off-permit change to the source that causes the emissions of a regulated pollutant subject to an applicable requirement, but not otherwise regulated under the permit, and the emissions resulting from the change, including any other data necessary to show compliance with applicable ambient air quality standards. The permittee shall provide contemporaneous notification to the Air Pollution Control Division and to the Environmental Protection Agency at the addresses listed in Appendix D of this Permit. The permit shield shall not apply to any off-permit change.

### 16. Opacity

### Regulation No. 1, 5 CCR 1001-3, §§ I., II.

The permittee shall comply with the opacity emissions limitation set forth in Regulation No. 1, §§ I.- II.

### 17. Open Burning

### Regulation No. 9, 5 CCR 1001-11

The permittee shall obtain a permit from the Division for any regulated open burning activities in accordance with provisions of Regulation No. 9.

### 18. Ozone Depleting Compounds

### Regulation No. 15, 5 CCR 1001-17

The permittee shall comply with the provisions of Regulation No. 15 concerning emissions of ozone depleting compounds. Sections I., II.C., II.D., III. IV., and V. of Regulation No. 15 shall be enforced as a matter of state law only.

### 19. Permit Expiration and Renewal

### Regulation No. 3, 5 CCR 1001-5, Part C, §§ III.B.6., IV.C., V.C.2.

- a. The permit term shall be five (5) years. The permit shall expire at the end of its term. Permit expiration terminates the permittee's right to operate unless a timely and complete renewal application is submitted.
- b. Applications for renewal shall be submitted at least twelve months, but not more than 18 months, prior to the expiration of the Operating Permit. An application for permit renewal may address only those portions of the permit that require revision, supplementing, or deletion, incorporating the remaining permit terms by reference from the previous permit. A copy of any materials incorporated by reference must be included with the application.

### 20. Portable Sources

### Regulation No. 3, 5 CCR 1001-5, Part C, § II.D.

Portable Source permittees shall notify the Air Pollution Control Division at least 10 days in advance of each change in location.

### 21. Prompt Deviation Reporting

### Regulation No. 3, 5 CCR 1001-5, Part C, § V.C.7.b.

The permittee shall promptly report any deviation from permit requirements, including those attributable to malfunction conditions as defined in the permit, the probable cause of such deviations, and any corrective actions or preventive measures taken.

"Prompt" is defined as follows:

First Issued: June 1, 1999

- Any definition of "prompt" or a specific timeframe for reporting deviations provided in an underlying applicable a. requirement as identified in this permit; or
- Where the underlying applicable requirement fails to address the time frame for reporting deviations, reports of b. deviations will be submitted based on the following schedule:
  - (i) For emissions of a hazardous air pollutant or a toxic air pollutant (as identified in the applicable regulation) that continue for more than an hour in excess of permit requirements, the report shall be made within 24 hours of the occurrence:
  - (ii) For emissions of any regulated air pollutant, excluding a hazardous air pollutant or a toxic air pollutant that continue for more than two hours in excess of permit requirements, the report shall be made within 48 hours; and
  - (iii) For all other deviations from permit requirements, the report shall be submitted every six (6) months, except as otherwise specified by the Division in the permit in accordance with paragraph 22.d. below.
- If any of the conditions in paragraphs b.i or b.ii above are met, the source shall notify the Division by telephone c. (303-692-3155) or facsimile (303-782-0278) based on the timetables listed above. [Explanatory note: Notification by telephone or facsimile must specify that this notification is a deviation report for an Operating Permit.] A written notice, certified consistent with General Condition 2.a. above (Certification Requirements), shall be submitted within 10 working days of the occurrence. All deviations reported under this section shall also be identified in the 6-month report required above.

"Prompt reporting" does not constitute an exception to the requirements of "Emergency Provisions" for the purpose of avoiding enforcement actions.

#### 22. **Record Keeping and Reporting Requirements**

### Regulation No. 3, 5 CCR 1001-5, Part A, § II.; Part C, §§ V.C.6., V.C.7.

- Unless otherwise provided in the source specific conditions of this Operating Permit, the permittee shall maintain compliance monitoring records that include the following information:
  - (i) date, place as defined in the Operating Permit, and time of sampling or measurements;
  - date(s) on which analyses were performed; (ii)
  - (iii) the company or entity that performed the analysis;
  - the analytical techniques or methods used; (iv)
  - the results of such analysis; and (v)
  - (vi) the operating conditions at the time of sampling or measurement.
- The permittee shall retain records of all required monitoring data and support information for a period of at least five b. (5) years from the date of the monitoring sample, measurement, report or application. Support information, for this purpose, includes all calibration and maintenance records and all original strip-chart recordings for continuous monitoring instrumentation, and copies of all reports required by the Operating Permit. With prior approval of the Air Pollution Control Division, the permittee may maintain any of the above records in a computerized form.
- Permittees must retain records of all required monitoring data and support information for the most recent twelve c. (12) month period, as well as compliance certifications for the past five (5) years on-site at all times. A permittee shall make available for the Air Pollution Control Division's review all other records of required monitoring data and support information required to be retained by the permittee upon 48 hours advance notice by the Division.

Operating Permit 95OPWE020 Renewed: January 1, 2013

- d. The permittee shall submit to the Air Pollution Control Division all reports of any required monitoring at least every six (6) months, unless an applicable requirement, the compliance assurance monitoring rule, or the Division requires submission on a more frequent basis. All instances of deviations from any permit requirements must be clearly identified in such reports.
- e. The permittee shall file an Air Pollutant Emissions Notice ("APEN") prior to constructing, modifying, or altering any facility, process, activity which constitutes a stationary source from which air pollutants are or are to be emitted, unless such source is exempt from the APEN filing requirements of Regulation No. 3, Part A, § II.D. A revised APEN shall be filed annually whenever a significant change in emissions, as defined in Regulation No. 3, Part A, § II.C.2., occurs; whenever there is a change in owner or operator of any facility, process, or activity; whenever new control equipment is installed; whenever a different type of control equipment replaces an existing type of control equipment; whenever a permit limitation must be modified; or before the APEN expires. An APEN is valid for a period of five years. The five-year period recommences when a revised APEN is received by the Air Pollution Control Division. Revised APENs shall be submitted no later than 30 days before the five-year term expires. Permittees submitting revised APENs to inform the Division of a change in actual emission rates must do so by April 30 of the following year. Where a permit revision is required, the revised APEN must be filed along with a request for permit revision. APENs for changes in control equipment must be submitted before the change occurs. Annual fees are based on the most recent APEN on file with the Division.

### 23. Reopenings for Cause

### Regulation No. 3, 5 CCR 1001-5, Part C, § XIII.

- a. The Air Pollution Control Division shall reopen, revise, and reissue Operating Permits; permit reopenings and reissuance shall be processed using the procedures set forth in Regulation No. 3, Part C, § III., except that proceedings to reopen and reissue permits affect only those parts of the permit for which cause to reopen exists.
- b. The Division shall reopen a permit whenever additional applicable requirements become applicable to a major source with a remaining permit term of three or more years, unless the effective date of the requirements is later than the date on which the permit expires, or unless a general permit is obtained to address the new requirements; whenever additional requirements (including excess emissions requirements) become applicable to an affected source under the acid rain program; whenever the Division determines the permit contains a material mistake or that inaccurate statements were made in establishing the emissions standards or other terms or conditions of the permit; or whenever the Division determines that the permit must be revised or revoked to assure compliance with an applicable requirement.
- c. The Division shall provide 30 days' advance notice to the permittee of its intent to reopen the permit, except that a shorter notice may be provided in the case of an emergency.
- d. The permit shield shall extend to those parts of the permit that have been changed pursuant to the reopening and reissuance procedure.

### **24.** Section 502(b)(10) Changes

### Regulation No. 3, 5 CCR 1001-5, Part C, § XII.A.

The permittee shall provide a minimum 7-day advance notification to the Air Pollution Control Division and to the Environmental Protection Agency at the addresses listed in Appendix D of this Permit. The permittee shall attach a copy of each such notice given to its Operating Permit.

Operating Permit 95OPWE020 First Issued: .

### 25. Severability Clause

### Regulation No. 3, 5 CCR 1001-5, Part C, § V.C.10.

In the event of a challenge to any portion of the permit, all emissions limits, specific and general conditions, monitoring, record keeping and reporting requirements of the permit, except those being challenged, remain valid and enforceable.

### 26. Significant Permit Modifications

### Regulation No. 3, 5 CCR 1001-5, Part C, § III.B.2.

The permittee shall not make a significant modification required to be reviewed under Regulation No. 3, Part B ("Construction Permit" requirements) without first receiving a construction permit. The permittee shall submit a complete Operating Permit application or application for an Operating Permit revision for any new or modified source within twelve months of commencing operation, to the address listed in Item 1 in Appendix D of this permit. If the permittee chooses to use the "Combined Construction/Operating Permit" application procedures of Regulation No. 3, Part C, then the Operating Permit must be received prior to commencing construction of the new or modified source.

### 27. Special Provisions Concerning the Acid Rain Program

### Regulation No. 3, 5 CCR 1001-5, Part C, §§ V.C.1.b. & 8

- a. Where an applicable requirement of the federal act is more stringent than an applicable requirement of regulations promulgated under Title IV of the federal act, 40 Code of Federal Regulations (CFR) Part 72, both provisions shall be incorporated into the permit and shall be federally enforceable.
- b. Emissions exceeding any allowances that the source lawfully holds under Title IV of the federal act or the regulations promulgated thereunder, 40 CFR Part 72, are expressly prohibited.

### 28. Transfer or Assignment of Ownership

### Regulation No. 3, 5 CCR 1001-5, Part C, § II.C.

No transfer or assignment of ownership of the Operating Permit source will be effective unless the prospective owner or operator applies to the Air Pollution Control Division on Division-supplied Administrative Permit Amendment forms, for reissuance of the existing Operating Permit. No administrative permit shall be complete until a written agreement containing a specific date for transfer of permit, responsibility, coverage, and liability between the permittee and the prospective owner or operator has been submitted to the Division.

### 29. Volatile Organic Compounds

### Regulation No. 7, 5 CCR 1001-9, §§ III & V.

The requirements in paragraphs a, b and e apply to sources located in an ozone non-attainment area or the Denver 1-hour ozone attainment/maintenance area. The requirements in paragraphs c and d apply statewide.

a. All storage tank gauging devices, anti-rotation devices, accesses, seals, hatches, roof drainage systems, support structures, and pressure relief valves shall be maintained and operated to prevent detectable vapor loss except when opened, actuated, or used for necessary and proper activities (e.g. maintenance). Such opening, actuation, or use shall be limited so as to minimize vapor loss.

Detectable vapor loss shall be determined visually, by touch, by presence of odor, or using a portable hydrocarbon analyzer. When an analyzer is used, detectable vapor loss means a VOC concentration exceeding 10,000 ppm. Testing shall be conducted as in Regulation No. 7, Section VIII.C.3.

b. Except when otherwise provided by Regulation No. 7, all volatile organic compounds, excluding petroleum liquids, transferred to any tank, container, or vehicle compartment with a capacity exceeding 212 liters (56 gallons), shall be

transferred using submerged or bottom filling equipment. For top loading, the fill tube shall reach within six inches of the bottom of the tank compartment. For bottom-fill operations, the inlet shall be flush with the tank bottom.

- c. The permittee shall not dispose of volatile organic compounds by evaporation or spillage unless Reasonably Available Control Technology (RACT) is utilized.
- d. No owner or operator of a bulk gasoline terminal, bulk gasoline plant, or gasoline dispensing facility as defined in Colorado Regulation No. 7, Section VI, shall permit gasoline to be intentionally spilled, discarded in sewers, stored in open containers, or disposed of in any other manner that would result in evaporation.
- e. Beer production and associated beer container storage and transfer operations involving volatile organic compounds with a true vapor pressure of less than 1.5 PSIA actual conditions are exempt from the provisions of paragraph b, above.

### 30. Wood Stoves and Wood burning Appliances

### Regulation No. 4, 5 CCR 1001-6

The permittee shall comply with the provisions of Regulation No. 4 concerning the advertisement, sale, installation, and use of wood stoves and wood burning appliances.

- **B-MONITORING AND PERMIT DEVIATION REPORT**
- C COMPLIANCE CERTIFICATION REPORT
- D NOTIFICATION ADDRESSES
- **E PERMIT ACRONYMS**
- F PERMIT MODIFICATIONS
- G CAM PLAN ENGINES
- H CAM PLAN DEHYS
- I AOS APPLICABILITY REPORTS

# \*DISCLAIMER:

None of the information found in these Appendices shall be considered to be State or Federally enforceable, except as otherwise provided in the permit, and is presented to assist the source, permitting authority, inspectors, and citizens.

### APPENDIX A

# **Inspection Information**

### **Directions to Plant**:

The station is in the southeast quarter of Section 28, Township 4 North, Range 64 West in Weld County. The station is located west of the intersection of Weld County Road (WCR) 55 and WCR 40 on the north side of WCR 40. The Marla Station is located south of Kersey, Colorado.

### **Safety Equipment Required:**

Hard Hat, Safety Shoes, Ear Protection, Eye Protection with Side Shield, Fire Retardant Clothing

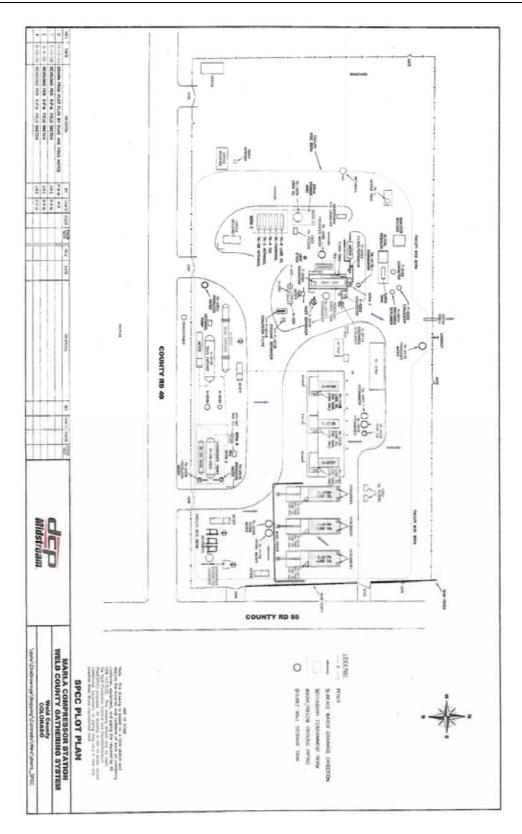

# **Facility Plot Plan:**

Figure 1 shows the plot plan as submitted on April 28, 2011 with the source's Title V Operating Permit Renewal Application.

## **List of Insignificant Activities**:

The following list of insignificant activities was provided by the source to assist in the understanding of the facility layout. Since there is no requirement to update such a list, activities may have changed since the last filing.

1,000 gallon Methanol tank
1,000 gallon Lube Oil tank
210 bbl Lube Oil tank
1,000 gallon TEG glycol tank
1,000 gallon Norkool glycol tank
20 bbl slop oil tank
Two 30,000 gallon pressurized condensate storage tanks
Pressurized Condensate Truck Loadout
Two Dehy Reboilers
20 bbl stormwater tank
Five 80 bbl stormwater tanks
Six 80 bbl produced water tanks
Condenser combustor
Six engine blowdown vents

# APPENDIX B Monitoring and Permit Deviation Report

## **Reporting Requirements and Definitions**

with codes ver 6/1/06

Please note that, pursuant to 113(c)(2) of the federal Clean Air Act, any person who knowingly:

- (A) makes any false material statement, representation, or certification in, or omits material information from, or knowingly alters, conceals, or fails to file or maintain any notice, application, record, report, plan, or other document required pursuant to the Act to be either filed or maintained (whether with respect to the requirements imposed by the Administrator or by a State);
- (B) fails to notify or report as required under the Act; or
- (C) falsifies, tampers with, renders inaccurate, or fails to install any monitoring device or method required to be maintained or followed under the Act shall, upon conviction, be punished by a fine pursuant to title 18 of the United States Code, or by imprisonment for not more than 2 years, or both. If a conviction of any person under this paragraph is for a violation committed after a first conviction of such person under this paragraph, the maximum punishment shall be doubled with respect to both the fine and imprisonment.

The permittee must comply with all conditions of this operating permit. Any permit noncompliance constitutes a violation of the Act and is grounds for enforcement action; for permit termination, revocation and reissuance, or modification; or for denial of a permit renewal application.

The Part 70 Operating Permit program requires three types of reports to be filed for all permits. All required reports must be certified by a responsible official.

# **Report #1: Monitoring Deviation Report** (due at least every six months)

For purposes of this operating permit, the Division is requiring that the monitoring reports are due every six months unless otherwise noted in the permit. All instances of deviations from permit monitoring requirements must be clearly identified in such reports.

For purposes of this operating permit, monitoring means any condition determined by observation, by data from any monitoring protocol, or by any other monitoring which is required by the permit as well as the recordkeeping associated with that monitoring. This would include, for example, fuel use or process rate monitoring, fuel analyses, and operational or control device parameter monitoring.

## **Report #2: Permit Deviation Report (must be reported "promptly")**

In addition to the monitoring requirements set forth in the permits as discussed above, each and every requirement of the permit is subject to deviation reporting. The reports must address deviations from permit requirements, including those attributable to upset conditions and malfunctions as defined in this Appendix, the probable cause of such deviations, and any corrective actions or preventive measures taken. All deviations from

Operating Permit 95OPWE020 First Issued: June 1, 1999

any term or condition of the permit are required to be summarized or referenced in the annual compliance certification.

For purposes of this operating permit, "upset" shall refer to both emergency conditions and upsets. Additional discussion on these conditions is provided later in this Appendix.

For purposes of this operating permit, the Division is requiring that the permit deviation reports are due as set forth in General Condition 21. Where the underlying applicable requirement contains a definition of prompt or otherwise specifies a time frame for reporting deviations, that definition or time frame shall govern. For example, quarterly Excess Emission Reports required by an NSPS or Regulation No. 1, Section IV.

In addition to the monitoring deviations discussed above, included in the meaning of deviation for the purposes of this operating permit are any of the following:

- (1) A situation where emissions exceed an emission limitation or standard contained in the permit;
- (2) A situation where process or control device parameter values demonstrate that an emission limitation or standard contained in the permit has not been met;
- (3) A situation in which observations or data collected demonstrates noncompliance with an emission limitation or standard or any work practice or operating condition required by the permit; or,
- (4) A situation in which an excursion or exceedance as defined in 40CFR Part 64 (the Compliance Assurance Monitoring (CAM) Rule) has occurred. (only if the emission point is subject to CAM)

For reporting purposes, the Division has combined the Monitoring Deviation Report with the Permit Deviation Report. All deviations shall be reported using the following codes:

1 = **Standard:** When the requirement is an emission limit or standard **2 = Process:** When the requirement is a production/process limit

3 = Monitor: When the requirement is monitoring 4 = Test: When the requirement is testing

5 = Maintenance: When required maintenance is not performed
 6 = Record: When the requirement is recordkeeping
 7 = Report: When the requirement is reporting

**8 = CAM:** A situation in which an excursion or exceedance as defined in 40CFR Part 64 (the

Compliance Assurance Monitoring (CAM) Rule) has occurred.

**9 = Other:** When the deviation is not covered by any of the above categories

## **Report #3: Compliance Certification (annually, as defined in the permit)**

Submission of compliance certifications with terms and conditions in the permit, including emission limitations, standards, or work practices, is required not less than annually.

Compliance Certifications are intended to state the compliance status of each requirement of the permit over the certification period. They must be based, at a minimum, on the testing and monitoring methods specified in the permit that were conducted during the relevant time period. In addition, if the owner or operator knows of other material information (i.e. information beyond required monitoring that has been specifically assessed in relation to how the information potentially affects compliance status), that information must be identified and addressed in the compliance certification. The compliance certification must include the following:

- The identification of each term or condition of the permit that is the basis of the certification;
- Whether or not the method(s) used by the owner or operator for determining the compliance status with each permit term and condition during the certification period was the method(s) specified in the permit. Such methods and other means shall include, at a minimum, the methods and means required in the permit. If necessary, the owner or operator also shall identify any other material information that must be included in the certification to comply with section 113(c)(2) of the Federal Clean Air Act, which prohibits knowingly making a false certification or omitting material information;
- The status of compliance with the terms and conditions of the permit, and whether compliance was continuous or intermittent. The certification shall identify each deviation and take it into account in the compliance certification. Note that not all deviations are considered violations.
- Such other facts as the Division may require, consistent with the applicable requirements to which the source is subject, to determine the compliance status of the source.

The Certification shall also identify as possible exceptions to compliance any periods during which compliance is required and in which an excursion or exceedance as defined under 40 CFR Part 64 (the Compliance Assurance Monitoring (CAM) Rule) has occurred. (only for emission points subject to CAM)

Note the requirement that the certification shall identify each deviation and take it into account in the compliance certification. Previously submitted deviation reports, including the deviation report submitted at the time of the annual certification, may be referenced in the compliance certification.

or were unavoidable to prevent loss of life, personal injury, or severe property damage.

For example, given the various emissions limitations and monitoring requirements to which a source may be subject, a deviation from one requirement may not be a deviation under another requirement which recognizes an exception and/or special circumstances relating to that same event. Further, periods of excess emissions during startup, shutdown and malfunction may not be found to be a violation of an emission limitation or standard where the source adequately shows that any potential deviations as a result of these infrequent periods were minimized to the extent practicable and could not have been prevented through careful planning, design,

# Startup, Shutdown, Malfunctions, Emergencies, and Upsets

Understanding the application of Startup, Shutdown, Malfunctions, Emergency provisions, and the Upset provisions is very important in both the deviation reports and the annual compliance certifications.

## Startup, Shutdown, and Malfunctions

Please note that exceedances of some New Source Performance Standards (NSPS) and Maximum Achievable Control Technology (MACT) standards that occur during Startup, Shutdown or Malfunctions may not be considered to be non-compliance since emission limits or standards often do not apply unless specifically stated in the NSPS. Such exceedances must, however, be reported as excess emissions per the NSPS/MACT rules and would still be noted in the deviation report. In regard to compliance certifications, the permittee should be confident of the information related to those deviations when making compliance determinations since they are subject to Division review. The concepts of Startup, Shutdown and Malfunctions also exist for Best Available Control Technology (BACT) sources, but are not applied in the same fashion as for NSPS and MACT sources.

# **Emergencies and Upsets**

Under the Emergency provisions of Part 70 and the Upset provisions of the State regulations, certain operational conditions may act as an affirmative defense against enforcement action if they are properly reported.

### **DEFINITIONS**

**Malfunction** (NSPS) means any sudden, infrequent, and not reasonably preventable failure of air pollution control equipment, process equipment, or a process to operate in a normal or usual manner. Failures that are caused in part by poor maintenance or careless operation are not malfunctions.

**Malfunction** (SIP) means any sudden and unavoidable failure of air pollution control equipment or process equipment or unintended failure of a process to operate in a normal or usual manner. Failures that are primarily caused by poor maintenance, careless operation, or any other preventable upset condition or preventable equipment breakdown shall not be considered malfunctions.

**Emergency** means any situation arising from sudden and reasonably unforeseeable events beyond the control of the source, including acts of God, which situation requires immediate corrective action to restore normal operation, and that causes the source to exceed a technology-based emission limitation under the permit, due to unavoidable increases in emissions attributable to the emergency. An emergency shall not include noncompliance to the extent caused by improperly designed equipment, lack of preventative maintenance, careless or improper operation, or operator error.

**Upset** means an unpredictable failure of air pollution control or process equipment which results in the violation of emission control regulations and which is not due to poor maintenance, improper or careless operations, or is otherwise preventable through exercise of reasonable care.

Operating Permit 95OPWE020

First Issued: June 1, 1999

# APPENDIX B Monitoring and Permit Deviation Report - Part I

- Following is the **required** format for the Monitoring and Permit Deviation report to be submitted to the 1. Division as set forth in General Condition 21. The Table below must be completed for all equipment or processes for which specific Operating Permit terms exist.
- 2. Part II of this Appendix B shows the format and information the Division will require for describing periods of monitoring and permit deviations, or upset or emergency conditions as indicated in the Table below. One Part II Form must be completed for each Deviation. Previously submitted reports (e.g. EER's or Upsets) may be referenced and the form need not be filled out in its entirety.

# APPENDIX C Required Format for Annual Compliance Certification Reports

Following is the format for the Compliance Certification report to be submitted to the Division and the U.S. EPA annually based on the effective date of the permit. The Table below must be completed for all equipment or processes for which specific Operating Permit terms exist.

FACILITY NAME: DCP Midstream, LP – Marla Compressor Station

OPERATING PERMIT NO: 950PWE020 REPORTING PERIOD:

# I. Facility Status

During the entire reporting period, this source was in compliance with <b>ALL</b> terms and cond	itions contained
in the Permit, each term and condition of which is identified and included by this reference.	The method(s)
used to determine compliance is/are the method(s) specified in the Permit.	

With the possible exception of the deviations identified in the table below, this source was in compliance with all terms and conditions contained in the Permit, each term and condition of which is identified and included by this reference, during the entire reporting period. The method used to determine compliance for each term and condition is the method specified in the Permit, unless otherwise indicated and described in the deviation report(s). Note that not all deviations are considered violations.

Operating Permit Unit ID	Unit Description	Deviations Reported <sup>1</sup>		Monitoring Method per Permit? <sup>2</sup>		Was compliance continuous or intermittent? <sup>3</sup>		
110		Previous	Current	YES	NO	Continuous	Intermittent	
C-148	Waukesha Model L-7042 GSI Natural Gas Fired Internal Combustion Reciprocating Engine, 4- cycle, Standard Rich Burn, 1478 HP; powering a natural gas compressor							
C-135	Waukesha Model L-7042 GSI Natural Gas Fired Internal Combustion Reciprocating Engine, 4- cycle, Standard Rich Burn, 1478 HP; powering a natural gas compressor							
C-151	Waukesha Model L-7042 GSI Natural Gas Fired Internal Combustion Reciprocating Engine, 4- cycle, Standard Rich Burn, 1478 HP; powering a							

Operating Permit Unit ID	Unit Description	1		Monit Metho Perm	d per	Was compliance continuous or intermittent? <sup>3</sup>		
		Previous	Current	YES	NO	Continuous	Intermittent	
	natural gas compressor							
P-106	Equipment Fugitive Leak VOC Emissions							
C-166	Waukesha Model L-7044 GSI Natural Gas Fired Internal Combustion Reciprocating Engine, 4- cycle, Standard Rich Burn, 1680 HP; powering a natural gas compressor							
C-174	Waukesha Model L-7044 GSI Natural Gas Fired Internal Combustion Reciprocating Engine, 4- cycle, Standard Rich Burn, 1680 HP; powering a natural gas compressor							
C-176	Waukesha Model L-7044 GSI Natural Gas Fired Internal Combustion Reciprocating Engine, 4- cycle, Standard Rich Burn 1680 HP; powering a natural gas compressor							
P-112	Natural Gas Dehydration System using triethylene glycol							
P-113	Natural Gas Dehydration System using triethylene glycol							
General Conditions								
Insignificant Activities <sup>4</sup>								

<sup>&</sup>lt;sup>1</sup> If deviations were noted in a previous deviation report, put an "X" under "previous". If deviations were noted in the current deviation report (i.e. for the last six months of the annual reporting period), put an "X" under "current". Mark both columns if both apply.

NOTE:

<sup>&</sup>lt;sup>2</sup> Note whether the method(s) used to determine the compliance status with each term and condition was the method(s) specified in the permit. If it was not, mark "no" and attach additional information/explanation.

<sup>&</sup>lt;sup>3</sup> Note whether the compliance status with of each term and condition provided was continuous or intermittent. "Intermittent Compliance" can mean either that noncompliance has occurred or that the owner or operator has data sufficient to certify compliance only on an intermittent basis. Certification of intermittent compliance therefore does not necessarily mean that any noncompliance has occurred.

The Periodic Monitoring requirements of the Operating Permit program rule are intended to provide assurance that even in the absence of a continuous system of monitoring the Title V source can demonstrate whether it has operated in continuous compliance for the duration of the reporting period. Therefore, if a source 1) conducts all of the monitoring and recordkeeping required in its permit, even if such activities are done periodically and not continuously, and if 2) such monitoring and recordkeeping does not indicate non-compliance, and if 3) the Responsible Official is not aware of any credible evidence that indicates non-compliance, then the Responsible Official can certify that the emission point(s) in question were in continuous compliance during the applicable time period.

<sup>&</sup>lt;sup>4</sup>Compliance status for these sources shall be based on a reasonable inquiry using readily available information.

# c. <u>Control Technology:</u>

Non-Selective Catalytic Reduction

# **II.** Monitoring Approach

	Indicator No. 1	Indicator No. 2		
I. Indicator	Temperature of exhaust gas into catalyst	Pressure drop across the catalyst		
Measurement Approach	Thermocouple	Measured in inches of water		
II. Indicator Range	The indicator range is a temperature between 750° F and 1250° F.  Excursions above 1250° F trigger engine shutdown. Excursions below 750° F trigger notification of excursion. Excursions trigger the permittee to investigate the engine performance and make any repairs or adjustments necessary. Any adjustments or repairs shall be recorded in a log, to be made available to the Division upon request.	The indicator range is a pressure drop across the catalyst that is within three inches of water from the pressure drop across the catalyst measured during the initial performance test (or within three inches of the manufacturer's specified range if the pressure drop was not determined during an initial performance test).  Excursions trigger the permittee to investigate the catalyst performance and make any repairs or adjustments necessary. Any adjustments or repairs shall be recorded in a log, to be made available to the Division upon request.		
III. Performance Criteria				
a. Data Representativeness	Temperature is measured at the inlet to the catalyst. The minimum accuracy is +/- 5 ° F.	Pressure drop is measured across the catalyst while the engine is operating.		
b. Verification of Operational Status	Thermocouple manufacturer guarantee.	Manometer manufacturer guarantee.		
c. QA/QC Practices/Criteria	Calibration annually.	Per manufacturer's recommendation.		
d. Monitoring Frequency	Daily.	Monthly		
f. Data Collection Procedures	Temperature data will be automatically or manually recorded on days that the engine is operating.	Pressure drop will be recorded once per month.		
e. Averaging Time	None	None.		

Operating Permit 95OPWE020 First Issued: June 1, 1999 Renewed: January 1, 2013

### **APPENDIX H**

# **Compliance Assurance Monitoring Plan - Dehydrators**

# I. Background

a. <u>Emission Unit Description:</u>

Natural Gas Dehydration Systems using triethylene glycol (P-112, P-113);

b. <u>Applicable Regulation, Emission Limit, Monitoring Requirements:</u>

Regulations: Operating Permit Section II, Condition 3.1

Emission Limitations: VOC (each dehy) 2.82 TPY

Any Individual HAP (facility-wide) 8.0 TPY Total HAP (facility-wide) 20.0 TPY

c. Control Technology:

Condenser (one for both units)
Flare (one for both units)

# **II.** Monitoring Approach

	Indicator No. 1	Indicator No. 2		
I. Indicator	Condenser Outlet Temperature	Flare		
Measurement Approach	The outlet temperature is monitored with a thermocouple.	Presence of a flame is continuously monitored with thermocouple or equivalent temperature sensing device.		
		Device senses heat and when there is an absence of a flame, then an alarm is sent to the control room.		
II. Indicator Range	An excursion is any calendar day (midnight to midnight) in which an average temperature above 140 °F is recorded. Excursions trigger an inspection and corrective action.	Any absence of a flame will trigger an investigation to determine the problem and to perform corrective action, record keeping relating to the problem, and reporting of the problem when necessary.		
III. Performance Criteria				
a. Data Representativeness	Temperature is measured at the outlet of the condenser.	Device sensing heat will determine the presence or absence of the flame.		
b. Verification of Operational Status	Thermocouple manufacturer guarantee.	The observation of the presence of a flame will indicate that the device is operational.		
c. QA/QC Practices/Criteria	Annual calibration.	Sensor will be calibrated and maintained.		
d. Monitoring Frequency	Daily.	Heat sensor will be monitored continuously.		
f. Data Collection Procedures	Outlet temperature automatically or manually recorded daily if operating.	Excursions and any adjustments or repairs made to the flare following an excursion shall be recorded in a log.		
e. Averaging Time	Daily average. Readings representative of the day (24-hour period) will be collected (i.e., a minimum of 4 readings will be taken throughout the day at approximately 6 hour intervals).	Heat sensor will operate continuously and averaging will not be necessary.		

Operating Permit 95OPWE020 First Issued: June 1, 1999 Renewed: January 1, 2013

# APPENDIX J Applicability Reports

ver 10/12/12

Note: A MS Word version of this Appendix can be found at:

http://www.colorado.gov/cs/Satellite/CDPHE-AP/CBON/1251597655816

## **DISCLAIMER:**

These are only example reports and do not cover all possible requirements.

# **Engine AOS Applicability Report Certification Language**

All information for the Applicability Reports must be certified by either 1) for Operating Permits, a Responsible Official as defined in Colorado Regulation No. 3, Part A, Section I.B.38. or 2) for Construction and General Permits, the person legally authorized to act on behalf of the source. This signed certification document must be packaged with the documents being submitted.

I have reviewed this certification in its entirety and, based on information and belief formed after reasonable inquiry, I certify that the statements and information contained in this certification are true, accurate and complete. Further, I agree that by signing and submitting these documents I agree that any new requirements identified in the Applicability Report(s) shall be considered to be Applicable Requirements as defined in Colorado Regulation No. 3, section I.B.9., and that such requirements shall be enforceable by the Division and its agents and shall be considered to be revisions to the underlying permit(s) referenced in the Report(s) until such time as the Permit is revised to reflect the new requirements.

Please note that the Colorado Statutes state that any person who knowingly, as defined in § 18-1-501(6), C.R.S., makes any false material statement, representation, or certification in this document is guilty of a misdemeanor and may be punished in accordance with the provisions of § 25-7 122.1, C.R.S.

# **NSPS JJJJ Example Report Format**

# DISCLAIMER: This is only an example report and does not cover all possible JJJJ requirements.

Note that as of September 1, 2008 that the Division has not yet adopted NSPS JJJJ. Until such time as it does, any engine subject to NSPS will be subject only under Federal law. Once the Division adopts NSPS JJJJ, there will be an additional step added to the determination of the NSPS. Under the provisions of Regulation No. 6, Part B, § I.B (which is referenced in Part A), any engine relocated from outside of the State of Colorado into the State of Colorado is considered to be a new source, subject to the requirements of NSPS JJJJ.

# NSPS Subpart JJJJ: Standards of Performance for Stationary Spark Ignition Internal Combustion **Engines**

Company: Acme Gas Processing

Source ID: 999/1234/001 Permit # 93OPXX999 Date: October 1, 2008

Manufacturer: BestEngineCompany

777 LowNox Model:

Nameplate HP: 1340

Engine Type: 2 Stroke Rich Burn

Manufacture Date: July 1, 2007 Date Engine Ordered: April 1, 2007

Note: If the engine is exempt from a requirement due to construction/manufacture date, supporting documentation must be provided.

Upon adoption of NSPS Subpart JJJJ into Colorado Regulation No. 6, Part A, if the engine is exempt because

the engine was relocated within the state of Colorado, supporting documentation must be provided.	
☐ NSPS JJJJ does not apply to this engine.	
NSPS JJJJ does apply to this engine.	

Note: Using the format below, the source must submit to the Division an analysis of all of the NSPS JJJJ applicable requirements that apply to this specific engine. The analysis below is an example only, based on a hypothetical engine that is a rich burn engine, greater than 500 HP, with a manufacture date after July 1, 2007.

# Determination of NSPS JJJJ requirements:

## 60.4230 Applicability

(a)(4)(i) Applies to this engine since it is a rich burn engine, greater than 500 HP, with a manufacture date after July 1, 2007.

# 60.4233 Emission Standards for Owners and Operators

(e) Owners and operators of stationary SI ICE with a maximum engine power greater than 100 HP must comply with the standards in Table 1.

Non-Emergency SI, Natural Gas, HP≥500, Manufactured after 7/1/2007

NO<sub>x</sub> 2.0 g/HP-hr or 160 ppmvd@15% O<sub>2</sub> CO 4.0 g/HP-hr or 540 ppmvd@15% O<sub>2</sub> VOC 1.0 g/HP-hr or 86 ppmvd@15% O<sub>2</sub>

# Other Requirements for Owners and Operators

60.4234	Emission standards must be met for the lifetime of the engine.

- 60.4235 N/A Sulfur content of gasoline.
- 60.4236 N/A (for now) After July 1, 2009 owners and operators may not install engines with a power rating  $\geq$  500HP that do not meet the emissions standards in 60.4230.
- 60.4237 N/A Emergency Engines.

# **60.4238 - 60.4242** Compliance Requirements for Manufacturers – (Not Applicable)

## **60.4243** Compliance Requirements for Owners and Operators

- (b)(2)(ii) To maintain compliance with the emission limits in 60.4233, owners of SI ICE  $\geq$  500HP must:
  - Keep a maintenance plan;
  - Keep records of conducted maintenance;
  - Maintain and operate the engine in a manner consistent with good air pollution control practice for minimizing emissions;
  - Conduct an initial performance test; and
  - Conduct subsequent performance tests every 8,760 hours or every three years, which ever comes first, in order to demonstrate compliance with the emission limits.
- (g) Air to fuel ratio controllers (AFRCs) must be maintained and operated appropriately in order to ensure proper operation of the engine and control device to minimize emissions at all times.

## **60.4244 Testing Requirements for Owners and Operators**

(a) Each performance test must be conducted within 10% of the highest achievable load and must comply with the testing requirements listed in 60.8 and Table 2 of NSPS JJJJ.

Operating Permit 95OPWE020 First

- (b) Performance tests may not be conducted during periods of startup, shutdown, or malfunction, as specified in 60.8(c). If the engine is non-operational when a performance test is due, the engine does not need to be started up just to test it, but will need to be tested immediately upon startup.
- (c) Three separate test runs must be conducted for each performance test as specified by 60.8(f). Each run must be within 10% of max load and be at least 1 hour in duration.
- (d) To determine compliance with the NO<sub>x</sub>, CO, and VOC mass per unit output emission limitations, the measured concentration must be converted using the equations outlined in this section of NSPS JJJJ.

## 60.4245 Notification, Reports, and Records for Owners and Operators

- (a) Owners of all stationary SI ICE must keep records of the following:
  - (1) All notifications submitted to comply with this subpart;
  - (2) Maintenance conducted on the engine;
  - (3) N/A Manufacturer information for certified engines, and
  - (4) Documentation that shows non-certified engines are in compliance with the emission standards.
- (b) N/A For emergency engines only.
- Owners of non-certified engines  $\geq$  500HP must submit an initial notification as required in 60.7(a)(1) which includes the following information:
  - (1) Name and address of the owner or operator;
  - (2) The address of the affected source;
  - (3) Engine information including make, model, engine family, serial number, model year, maximum engine power, and engine displacement;
  - (4) Emission control equipment; and
  - (5) Fuel used.

### **CONCLUSION OF FINDINGS (EXAMPLE ONLY)**

In general, Acme's 1,235HP, Waukesha 7042 GSI engine is subject to the emissions limitations summarized in Table 1 of NSPS JJJJ. ACME will meet these emission limitations using an AFRC and a non-selective catalytic converter (NSCR). These emission rates will be met throughout the life of the engine. A maintenance plan will be kept and all maintenance activities will be recorded. Compliance with the emission limits will be confirmed by the initial performance tests, which shall be conducted following the procedures outlined in 60.4244. Copies of performance test results will be submitted within 60 days of the completion of each test. Since this is an uncertified engine, an initial notification will be submitted including all of the requested information in 40.4245 within 30 days of startup. ACME will keep records of all compliance related materials.

First Issued: June 1, 1999

# **MACT ZZZZ Example Report Format**

DISCLAIMER: This is only an example report and does not cover all possible ZZZZ requirements.

MACT Subpart ZZZZ: National Emissions Standards for Hazardous Air Pollutants for Stationary Reciprocating Internal Combustion Engines

Company: Acme Gas Processing

Source ID: 999/1234/001 Permit #: 93OPXX999 Date: October 1, 2008

Manufacturer: BestEngineCompany

Model: 777 LowNox

Nameplate HP: 1340

Engine Type: 2 Stroke Rich Burn

Manufacture Date: July 1, 2007 Date Engine Ordered: April 1, 2007

Note: If the engine is exempt from a requirement due to construction/reconstruction date, supporting documentation must be provided.

] MACT	ZZZZ	does n	ot ap	ply to	this e	engine
MACT	ZZZZ	does a	pply 1	to this	engi	ne.

Note: Using the format below, the source must submit to the Division an analysis of all of the major source MACT ZZZZ applicable requirements that apply to this specific engine. **The analysis below is an example only**, based on a hypothetical new engine located at a major source of HAP emissions.

# <u>Determination of MACT ZZZZ requirements:</u>

### 63.6585 Applicability

This subpart is applicable to Acme's engine since they are going to be operating a new stationary reciprocating internal combustion engine (RICE) at a major source of HAP emissions.

## 63.6590 What Parts of My Plant Does This Subpart Cover?

This subpart covers Acme's new stationary reciprocating internal combustion engine.

## 63.6595 When do I have to comply with this Subpart?

(a)(5) The engine must comply with the applicable emission limitations and operating limitations upon startup.

63.6600 Emission and operating limitations for RICE site rated at more than 500 hp

Operating Permit 95OPWE020

First Issued: June 1, 1999

(a) The engine is subject to the emission limits in table 1a and the operating limits in table 1b. ACME will meet the emission limitations by reducing formaldehyde emissions by 76 percent and will maintain the catalyst such that the pressure drop does not change by more than 2 inches of  $H_2O$  at 100 % load plus or minus 10 percent from the pressure drop measured during the initial performance test and will maintain the temperature of the engine exhaust so that the catalyst inlet temperature is greater than or equal to 750 ° F and less than or equal to 1250 ° F.

The engine will be equipped with non-selective catalytic reduction and an air fuel controller to meet the emission limitations.

# 63.6601 & 63.6611 Requirements for 4SLB engines between 250 and 200 hp

These requirements do not apply.

## **63.6605** General Requirements

- (a) The engine will comply with the emission and operating limitations at all times, except during periods of startup, shutdown and malfunction (SSM)
- (b) The engine, including air pollution control and monitoring equipment shall be operating in a manner consistent with good air pollution control practices for minimizing emissions at all times, including during SSM.

## **63.6610** Initial performance test

- (a) the performance tests specified in Table 4 (select sampling port and measure O<sub>2</sub>, moisture and formaldehyde at inlet and outlet of the control device) shall be conducted within 180 days of startup.
- (b) & (c) not applicable construction did not commence between 12/19/02 and 6/15/04.
- (d) previous performance tests have not been conducted on this unit within two years, therefore, this provision does not apply.

## **63.6615** Subsequent performance tests

Subsequent tests will be conducted as specified in Table 3. No additional testing is required for 4SRB engines meeting the formaldehyde percent reduction requirements.

## **63.6620** Performance test procedures

- (b) tests must be conducted at 100 % load plus or minus 10%
- (c) tests may not be conducted during periods of SSM.
- (d) must conduct three 1-hr test runs
- (e) equation (e)(1) shall be used to determine compliance with the percent reduction requirement.
- (f), (g) & (h) Not applicable
- (i) engine load during test shall be determined as specified in this paragraph.

## 63.6625 Monitoring, installation, operation and maintenance requirements

(a), (c) & (d) Not applicable

First Issued: June 1, 1999

(b) a continuous parameter monitoring system (CPMS) shall be installed to measure the catalyst inlet temperature. The CPMS will meet the requirements in § 63.8

# 63.6630 Demonstrating initial compliance

- (a) initial compliance shall be determined in accordance with table 5 (initial performance test must indicate formaldehyde reduction of 76 percent or more, a CPMS must be installed to measure inlet temperature of the catalyst and the pressure drop and catalyst inlet temperature must be recorded during the initial performance test).
- (b) pressure differential will be established during the initial performance test.
- (c) Notification of compliance status will be submitted and will contain the results of the initial compliance demonstration.

# **63.6635** Monitoring to demonstrate continuous compliance

- (b) except for monitor malfunctions, associated repairs, and required QA/QC activities monitoring must be continuous at all time the engine is operating.
- (c) data recorded during monitoring malfunctions, associated repairs and required QA/QC activities must not be used in data averages and calculations to report operating levels, however, all the valid data collected during other periods shall be used.

# **63.6640** Demonstrating continuous compliance

- (a) continuous compliance will be demonstrated as specified in table 6 (collect catalyst inlet temperature data, reduce that data to 4-hr rolling average and maintain the 4-hr rolling averages to within the operating limitation and measuring the pressure drop across the catalyst once per month and demonstrating that the pressure drop meets the operating limitation.
- (b) deviations from the emission and operating limitations must be reported per § 63.6550. If catalyst is changed the operating parameters established during the initial performance test must be re-established.

When operating parameters re-established a performance test must also be conducted.

### **63.6645** Notifications

- (a) Submit notifications in §§ 63.7(b) & (c), 63.8(e), (f)(4) and (f)(6), 63.9(b) thru (e) & (g) & (h) that apply by dates specified.
- (b) Not applicable. Acme unit started after effective dated for Subpart ZZZZ.
- (c) Submit initial notification within 120 days after becoming subject to Subpart ZZZZ.
- (d) thru (f) Not applicable. Acme engine greater than 500 hp and subject to requirements in Subpart ZZZZ.
- (g) & (h) Submit notification of intent to conduct performance test and notification of compliance status.

### **63.6650 Reports**

- (a) Submit reports required by table 7 (compliance report and SSM reports (if actions inconsistent with SSM plan)
- (b) Not applicable, an alternate schedule for report submittal has been approved. Reports will be submitted with title v reports

First Issued: June 1, 1999

- (c) Compliance reports to contain the following information: company name and address, statement by responsible official certifying accuracy, date of report and beginning and end of reporting period, if SSM the information in 63.10(d)(5)(i), if no deviations a statement saying that, if no periods when CPMS out of control a statement saying that.
- (d) Not applicable, using CPMS
- (e) For each deviation the information in (e)(1) thru (e)(12) shall be provided.
- (f) Applicable. Compliance reports are submitted with title v reports. Compliance reports under Subpart ZZZZ include all necessary info for title v deviation report with respect to Subpart ZZZZ requirements.
- (g) Not applicable. Acme engine not firing landfill or digester gas.

# 63.6655 Recordkeeping

- (a) Retain records as follows: copy of each notification and report (including all documentation supporting any initial notification or notification of compliance status), records in 63.6(e)(iii) thru (v) related to SSM, and records of performance tests and evaluations.
- (b) CPMS records including records in 63.10(b)(2)(vi) thru (xi), previous versions of the performance evaluation plan required by 63.8(d)(3) and requests for alternatives to the relative accuracy test for CPMS as required by 63.8(f)(6)(i).
- (c) Not applicable. Acme engine not firing landfill or digester gas.
- (d) Will keep records required in Table 6 (monthly pressure drop readings, 4-hr averages of catalyst inlet temperature) to show continuous compliance with emission and operating limits.

## 63.6660 Form and length of records

- (a) records must be in a form suitable and readily available for expeditions review
- (b) records must be retained for five years
- (c) records must be retained on-site for first 2 years, may be retained off-site for the remaining 3 years

### **63.6665** General Provisions

This engine must comply with the general provisions as indicated in Table 8.

### **CONCLUSION OF FINDINGS (EXAMPLE ONLY)**

Since this engine is subject to the requirements of MACT Subpart ZZZZ. The engine will be installed with a non-selective catalyst to meet the formaldehyde reduction requirement of 76% or more. An initial performance test will be conducted within 180 days of startup to demonstrate compliance with the formaldehyde percent reduction requirement. During the initial performance test, the pressure drop across the catalyst will be measured. A CPMS will be installed to measure the catalyst inlet temperature. Continuous compliance will be demonstrated by keeping the 4-hr rolling averages of catalyst inlet temperature within the operating limitations and recording the pressure drop across the catalyst monthly and demonstrating that the pressure drop is within the operating limitation.

Records, notifications and reports will be submitted as required. To that end required reports and notifications include initial notification, notice of intent to conduct performance test, notification of compliance status, SSM reports (if required) and semi-annual compliance reports.

First Issued: June 1, 1999
